### **ASX Announcement**

## **DEVELOPMENT UPDATE MEDICAL CANNABIS VAPORISER AND APP**

- Development of refillable cannabis flower vaporizer cartridge
- Advanced temperature control in the Seng Vital Medical Cannabis App
- Temperature control and refillable cartridge provides superior patient control
- Refillable cartridge meets emerging trends in medical cannabis market
- German medical cannabis flower treatment rates trending at €5 million per month

Lifespot Health Ltd ("**Company**") is pleased to provide an update on new product developments.

The Company's Medihale® Medical Cannabis Vaporiser system is a fully integrated vaporiser solution, powered by Bodytel™ and supported by the Seng Vital Medical Cannabis application. Our devices and accompanying software are undergoing evaluation with a number of medical cannabis companies as they progress development programs for vaporising, targeting diseases such as chronic pain, chemotherapy induced nausea and vomiting and post-traumatic stress disorder.

### ***Medihale® Medical Cannabis Flower vaporising system***

In response to advanced patient needs and the changing regulatory environment in Europe and Canada, the Company has completed development of an advanced version of a refillable flower cartridge for the Medihale® system. The flower cartridge is targeted at the medical cannabis market.

Available in February 2020, our new refillable flower vaporising cartridge enables a patient to be supplied the Medihale Flower vaporiser by their licensed cannabis producer or other channels, and then to be dispensed their medical cannabis flower cartridge from their doctor or dispensary. This dual pathway approach simplifies the supply chain and regulatory pathway for suppliers, doctors, pharmacists and patients.

The Medihale® Medical Cannabis Flower vaporising system features are:

- Fingerprint sign-on and child proof security;
- Touch-screen and App vaping temperature control;
- Vape event monitoring via supporting Seng-Vital App and Bodytel system; and
- Closed system or refillable medical cannabis flower cartridge.

## Seng Vital Medical Cannabis App

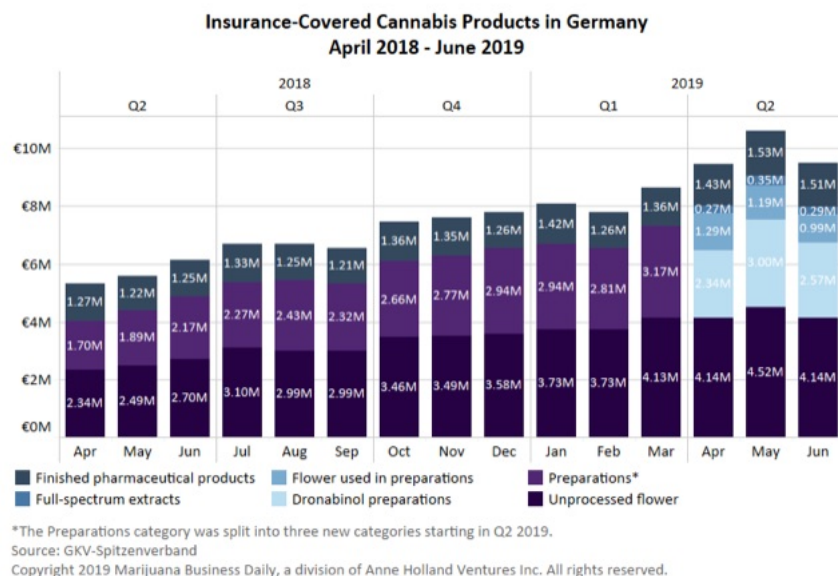

In addition, the temperature control function is now not only available on the vaporiser touchscreen but also on the Seng Vital Medical Cannabis App. By providing greater flexibility over vaping temperature control, patients can optimise the vaping experience to suit individual tastes or follow instructions from their prescribing doctor.

Product orders for Medihale® and Terms of supply and full specifications are available on request from [info@lifespote-health.com](mailto:info@lifespote-health.com)

## Medical Cannabis Flower segment growth

The Company believes the advancements in the Medihale Medical Cannabis Vaporiser position the product well for uptake in the medical cannabis flower market.

The value of insurance-covered cannabis products in Germany across all formats peaked at over €10 million in a single month in Q2 2019, and was approximately €9.5 million as at June 2019, with the value of cannabis-flower related treatments in Germany exceeding €5 million during June 2019.

### **About Lifespote Health Ltd.**

#### **CONNECTING HARDWARE WITH SOFTWARE – DIGITAL TECHNOLOGY FOR BETTER HEALTHCARE**

Our core expertise is in connecting medical diagnostic devices and digital medicine delivery systems via Bluetooth and Smart device APPs to our cloud based ISO13485 accredited Bodytel patient management system. Our systems and applications are cloud and smartphone-based and easy to use.

We provide our diagnostic systems and medicine delivery platforms to healthcare enterprises for own branding white label contracts. Our German based BodyTel system is based on modern internet technology utilizing advanced technologies such as document-based databases and biological neural networks.

Our German based Seng-Vital is specialized in development of hardware in the medical and non-medical Cannabis categories. In 2019 the company launched Medihale®, a digitally integrated medical cannabis vaporiser hardware and software solution that incorporates Bodytel Apps to be the world's first fully integrated vaporising system. The Company continues to lead the way in innovative vaporiser hardware and software for OEM clients.
