

dorsaVi adds to growing patent portfolio and further strengthens IP and leadership position in medical grade wearables

Key highlights:

- **New body orientation algorithm patent granted in the US to protect and support dorsaVi's technology and commercial strategy**
- **A total of seven IP families held by the Company with 15 patents granted across eight countries**
- **dorsaVi's growing patent portfolio highlights the cutting-edge innovation that is at the centre of dorsaVi's wearable motion analysis technology**
- **Strong IP position is a key differentiator for dorsaVi in both clinical and workplace markets**

Melbourne, Australia, 15 November 2018; dorsaVi (ASX: DVL) is pleased to announce the strengthening of its intellectual property position with the granting of a new body orientation algorithm patent in the USA. This patent has been previously granted in Australia (5 July 2018) and in China (4 May 2017). The new patent not only protects dorsaVi's technologies but allows the Company to continue to evolve its products and maintain its global leadership position in medical grade wearables.

The US Patent & Trademark Office granted dorsaVi's patent application, *Apparatus and method for classifying orientation of a body of a mammal*. This patent protects the apparatus (the sensors) and also the method (the algorithms) that allows dorsaVi's sensor technology to determine body orientation. This is an important component when assessing whether certain movements are associated with a higher risk of causing or contributing to an injury.

The body orientation algorithm patent is able to detect whether a person is sitting, standing, lying down or performing dynamic activities. This data is required and valuable to dorsaVi customers in both the workplace and clinical markets.

The patent expires on 19 December 2033. Further information on this patent is available [here](#).

About dorsaVi

dorsaVi (ASX: DVL) is an ASX company focused on developing innovative motion analysis device technologies for use in elite sports, occupational health and safety and clinical applications. dorsaVi believes its wearable sensor technology enables – for the first time – many aspects of detailed human movement and position to be accurately captured, quantified, and assessed outside a biomechanics lab, in both real-time and real situations for up to 24 hours.

Our technology has applications across three sectors:

- **Clinical:** dorsaVi is transforming the management of patients with its clinical solutions - ViMove, ViMove2 and Professional Suite – which provide objective assessment, monitoring outside the clinic and immediate biofeedback. dorsaVi is currently used by medical and physiotherapy practices globally.
- **Elite Sports:** ViPerform is allowing coaches and medical teams managing elite athletes and teams to screen athletes and provide objective evidence for decisions on return to play, measure biomechanics and provide immediate biofeedback out on the field, tailor and track training programs and optimise technique and peak performance. ViPerform is being used in the US by the National Basketball Association (NBA), the Major Soccer League (MLS) and the National Football League (NFL), by the AFL and NRL clubs, Cricket Australia, and the Australian Institute of Sport (AIS) in Australia, and by Barclays Premier League (EPL) clubs, England and Wales Cricket Board and the Board of Control for Cricket in India as well as various Olympic teams and athletes internationally.
- **OHS:** dorsaVi enables employers to assess risk of injury for employees as well as test the effectiveness of proposed changes to workplace design, equipment or methods based on objective evidence. dorsaVi has been used by major corporations including Sodexo, London Underground, Vinci Construction, Crown Resorts, Caterpillar (US), Monash Health, Coles, Woolworths, Toll, Toyota, Orora (formerly Amcor), Crown and BHP Billiton.
