

QUARTERLY ACTIVITIES REPORT – DECEMBER 2021

HIGHLIGHTS

PILBARA GOLD PROJECTS

- A synthesis of all available geophysical datasets over the Company's Central Pilbara Project identified multiple new Hemi-Style gold targets and rare metal pegmatites

Gold

- Data filtering technology identified 104 new Hemi-style Intrusion Related Gold targets (IRGS) and 66 structural targets
- An improved understanding of the structural architecture of the region and of the controls on known mineralisation has resulted in a reinterpretation and refinement of existing targets and the identification of many new high priority target areas

Rare Metal Pegmatites

- Recent helicopter supported field work confirmed the presence of rare metal pegmatites with recorded Lithium-Tantalum-Tin mineralisation at several locations along strike to the southwest of the Wodgina-Mt. Francisco Lithium-Caesium-Tantalum (LCT) Pegmatite Belt
- Phase 2 Drilling commenced on high priority Hemi-style and structural gold targets, a total of 1500m of the planned 5000m RC drilling programme completed on schedule
- Multiple high priority "Hemi Style" and Structural gold targets identified for immediate drill testing across the Company's extensive project portfolio
- Focus was on high priority targets within the Brahman and Droughtmaster Gold projects
- Strike Drilling completed the drilling programme
- Geochemical soil surveys underway across all projects with helicopter and ground support
- Ongoing target generation, refinement and prioritisation will be underpinned by results obtained from the current phase of exploration activity

NEW ZEALAND GOLD PROJECTS

- Commenced work to start the New Zealand 2021/2022 summer field season at the Lammerlaw Gold Project in the Otago Goldfield
- Ridge and spur soil sampling continued along the northern EM lineaments and commenced along the southern EM lineaments at Lammerlaw
- Secured land access to complete trenching at the O.P.Q. Gold Project

LOCHINVAR COAL PROJECT – SCOTLAND

- Lochinvar central licence renewal executed ensuring all tenements are in good standing and 100% owned by NAE

CORPORATE

- The Company has cash reserves of A\$5.029m as at 31 December 2021
- AGM of shareholders was held on 23 November and all resolutions considered were put to a vote on a Poll and were passed

New Age Exploration (ASX:NAE) (**NAE** or the **Company**), is pleased to provide shareholders the Company's Quarterly Activities Report for the period ending 31 December 2021.

PILBARA GOLD PROJECTS – WESTERN AUSTRALIA

Project Background

NAE's Central Pilbara Project comprises 17 Exploration Licences (all granted) which collectively secure a total area of 2,030 km² centred over the highly prospective yet under-explored Mallina-Whim Creek Basin, Central Pilbara Tectonic Zone (CPTZ), Pilbara Craton Western Australia.

The Project surrounds De Grey Mining's' Mallina Gold Project and the recently discovered Hemi Gold Deposit (Refer ASX: DEG), and is near the world class rare metal LCT pegmatite mining operations of Wodgina (Mineral Resources ASX:MIN) and Pilgangoora (Pilbara Minerals ASX: PLS)

The region has remained under-explored due largely to its relative remoteness, extensive areas of recent cover and restricted access.

NAE considers the area to have the potential to host Orogenic gold deposits, Hemi-style IRGS and Shear Zone hosted lode gold deposits, epithermal gold mineralisation, Whim Creek style sedimentary hosted VHMS Copper-Zinc-Lead-Silver base metal deposits and rare metal LCT pegmatite deposits. (Refer Figure 1)

Regional Setting

The Mallina-Whim Creek Basin is interpreted to represent a late stage in the geological evolution of the granite-greenstone terrane of the Archaean Pilbara Craton and developed at the boundary between the West and East Pilbara Granite-Greenstone Terranes. Geologically the project includes volcano-sedimentary sequences (including turbidites) of the De Grey Super Group, Mallina Formation, the Whim Creek Group in the north western part of the Mallina Basin, mafic-ultramafic volcanics and intrusive complexes, Granites and Sanukitoids (high-magnesium

diorites/granodiorites) of the Sisters Supersuite. Stratigraphically equivalent rocks are considered to underlie the entire basin (Smithies et al 2001). Major structures include the ENE trending Scholl, Mallina, Wohler and Tabba Tabba Shear Zones and the NNW trending second and third order splay faults which link them.

Importantly, each of these structural corridors and high magnesium intrusives of the Sisters Supersuite associated with them, are confirmed hosts to significant gold mineralisation within the region, including De Grey's Mallina Gold Project, including the Indee and Towerana Gold Deposits and the most recently discovered Hemi Gold Deposit (6.8Moz Au, Refer ASX: DEG June 2021 Resource Report).

Significantly, turbidites of the De Grey Super Group are reported to account for some 50% of all of the known gold production and resources within the Pilbara. Geophysical Data Filtering the work completed by Fathom Geophysics clearly shows most known gold occurrences (including the Hemi Gold Deposit) to be situated on or in close proximity to major NNE to E-W trending structures or second and third order N-S to NNW trending splay faults. These features represent a potential locus of deep crustal/mantle tapping faults and an associated plumbing system for circulating and trapping mineralising fluids. Numerous of these same structures trend thorough NAE's project and represent high priority target areas considered worthy of drill testing. (Refer figure 3).

Ongoing Activities

In late October, the Company announced that it had completed a synthesis of all available geophysical datasets over its Central Pilbara Project. Refer Figure 1. ([ASX Announcement 28 October 2021](#))

The application of industry leading, proprietary data filtering technology enhanced critical features relevant to the mineral systems and deposit models being targeted. Understanding these key elements was a critical next step in guiding effective exploration across the Company's extensive ground holding in the region (2,030 km²).

The synthesis was completed by specialist geophysical consulting group, Fathom Geophysics, under the guidance of Dr Amanda Buckingham (Principal Geophysicist). Fathom Geophysics are internationally recognised for their expertise in successfully targeting mineralisation in areas where the bedrock geology of interest is hidden beneath younger transported cover.

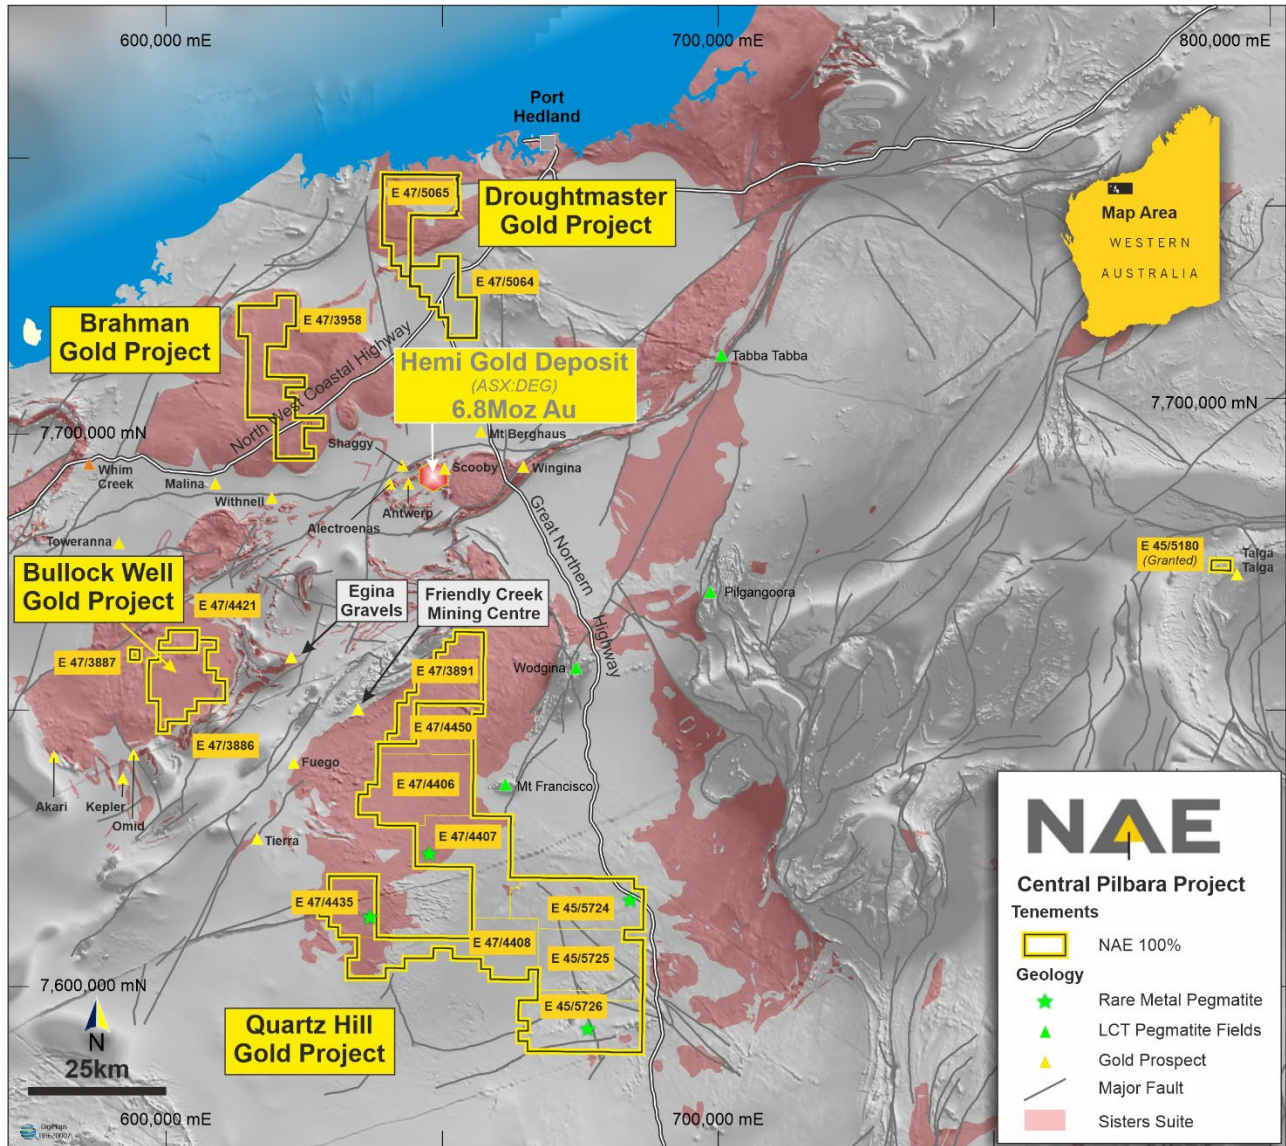

Figure 1: Central Pilbara Project

The recent work identified 104 new Hemi-style IRGS targets, 66 new structural targets and refined previously reported targets (refer [NAE ASX Quarterly Report September 2021](#)). Numerous high priority targets display clear similarities with the Hemi Gold Deposit and with those associated with the Scholl, Mallina and Tappa Tappa Shear Zones. None of the new targets had been previously drill tested.

Importantly, refinement of previously identified targets now indicated that much of the initial campaign of drilling by NAE did not reach target depths due to limited capacity of the rig which was available at the time and therefore those targets also remain untested. Low order gold and base metal geochemical anomalism reported from this phase of drilling is however encouraging in that it may be associated with a deeper, untested source. (Refer [NAE ASX Quarterly Report September 2021](#)).

The geophysical data synthesis completed by Fathom Geophysics incorporated a range of open file public domain regional scale data sets together with prospect scale surveys completed by NAE during April 2021 including:

- Regional and detailed aeromagnetic data
- Regional airborne electromagnetic data
- Regional airborne and ground-based gravity data
- Satellite imagery

In addition, recent helicopter supported field reconnaissance confirmed the presence of lithium-tantalum-tin rare metal pegmatites at several locations within the interpreted extension of the world class Wodgina-Mt. Francisco Rare Metal Lithium-Caesium-Tantalum (LCT) Pegmatite Belt ~50km southwest of Mineral Resources' (ASX: MIN) Wodgina Mine (one of the largest hard rock lithium mines in the world) and ~29km southwest of Pilbara Minerals' (ASX: PLS) Mt. Francisco Lithium-Tantalum Project. (Refer Photos 2 & 3, Figures 1 & 5.)

Photo 1: Helicopter landed onsite at Quartz Hill Project.

Geophysical Data Filtering the work completed by Fathom Geophysics clearly shows the majority of known gold occurrences (including the Hemi Gold Deposit) to be situated on or in close proximity to major NNE to E-W trending structures or second and third order N-S to NNW trending splay faults. These features represent a potential locus of deep crustal/mantle tapping faults and an associated plumbing system for circulating and trapping mineralising fluids. Numerous of these same structures trend thorough NAE's project and represent high priority target areas considered worthy of drill testing. (Refer Figure 2.)

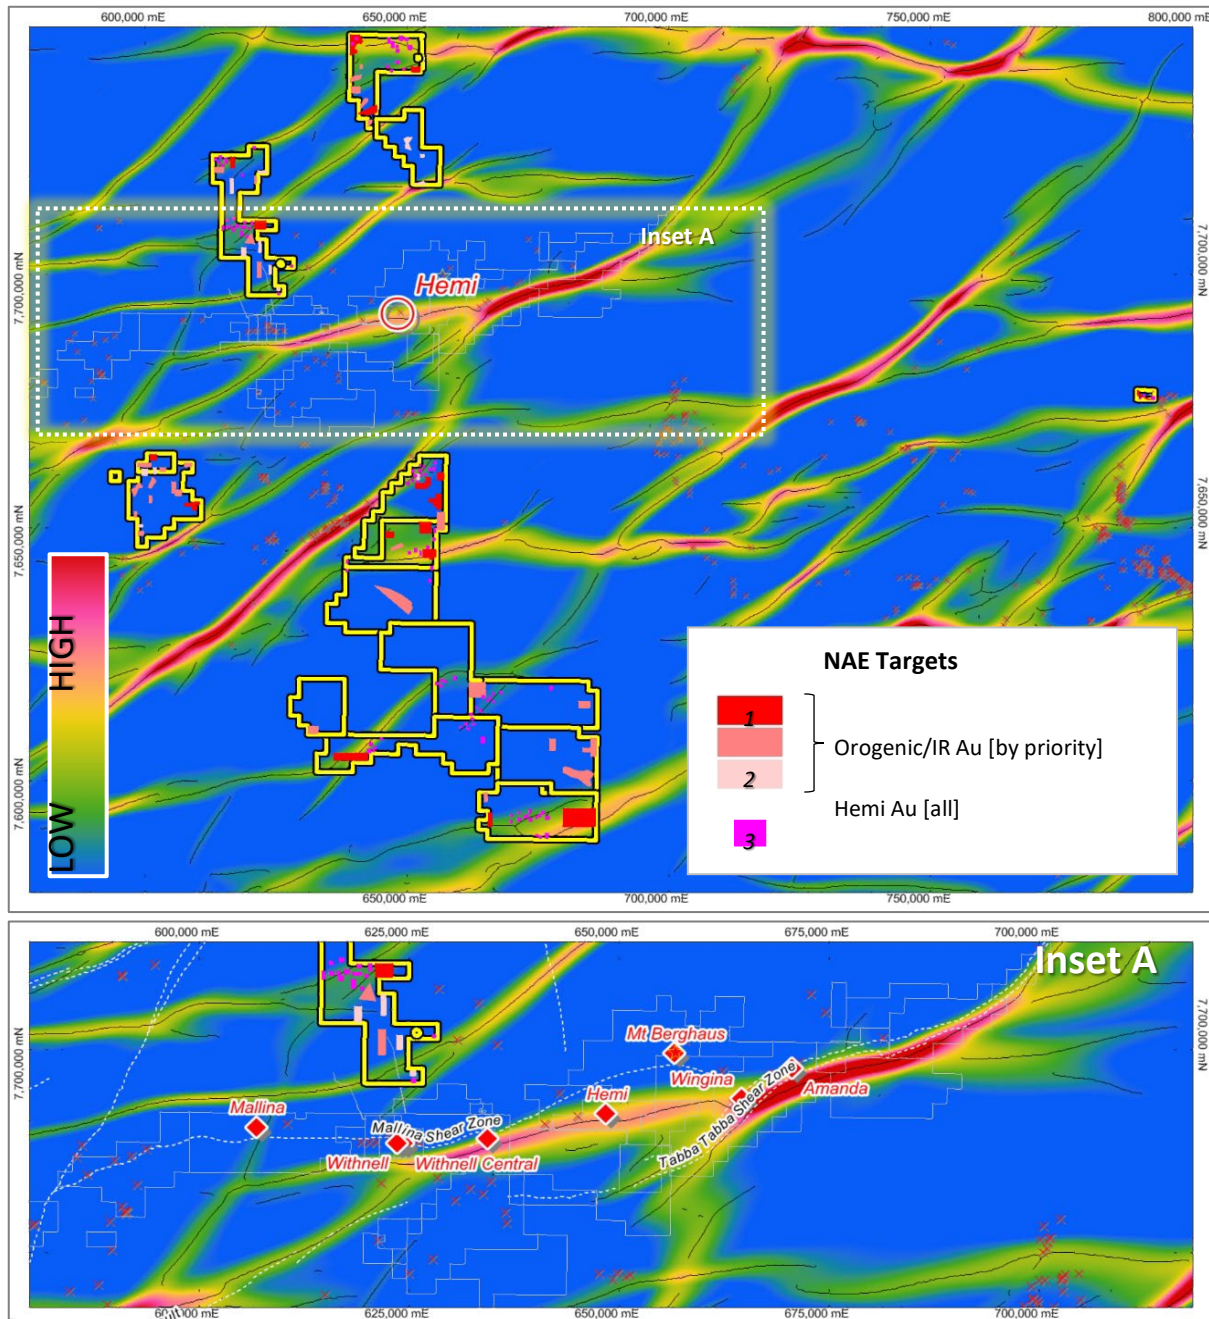

Figure 2: Shows the NAE targets over gravity derived belt parallel structure. An inset over the De Grey Mining tenement package is included, highlighting the location of Hemi and other significant deposits. Note the number of Hemi-type belt parallel and linking structures passing through NAE's project tenure.

Prospect Scale

The geophysical data synthesis significantly improved the Company's understanding of the regional framework and structural architecture of the project area. The work identified 104 new Hemi-style IRGS targets, 66 structural targets and refined previously reported targets. (Refer Figures 2, 3 & 4.)

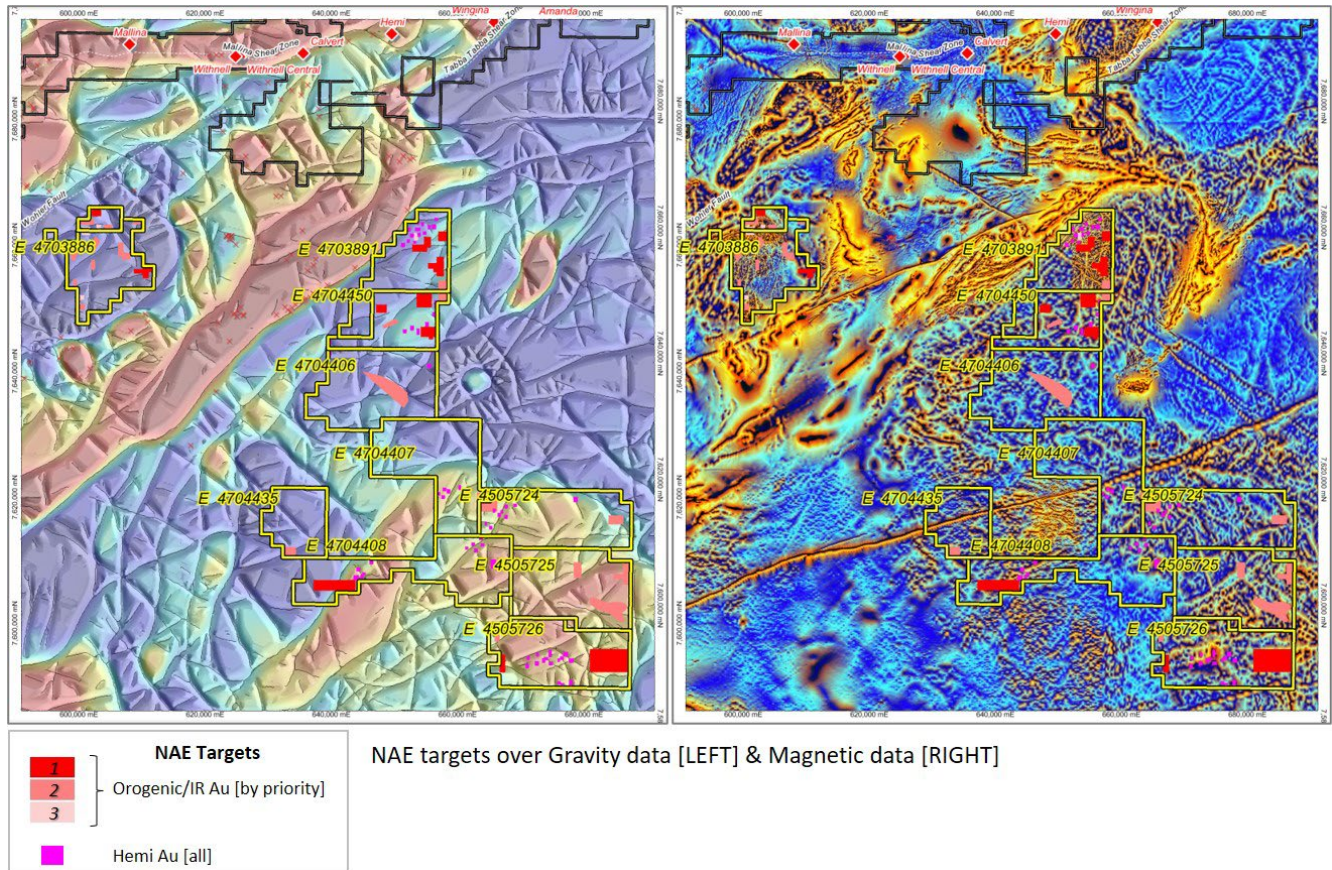

Figure 3: NAE targets over Bullock Well and Quartz Hill Gold Projects.

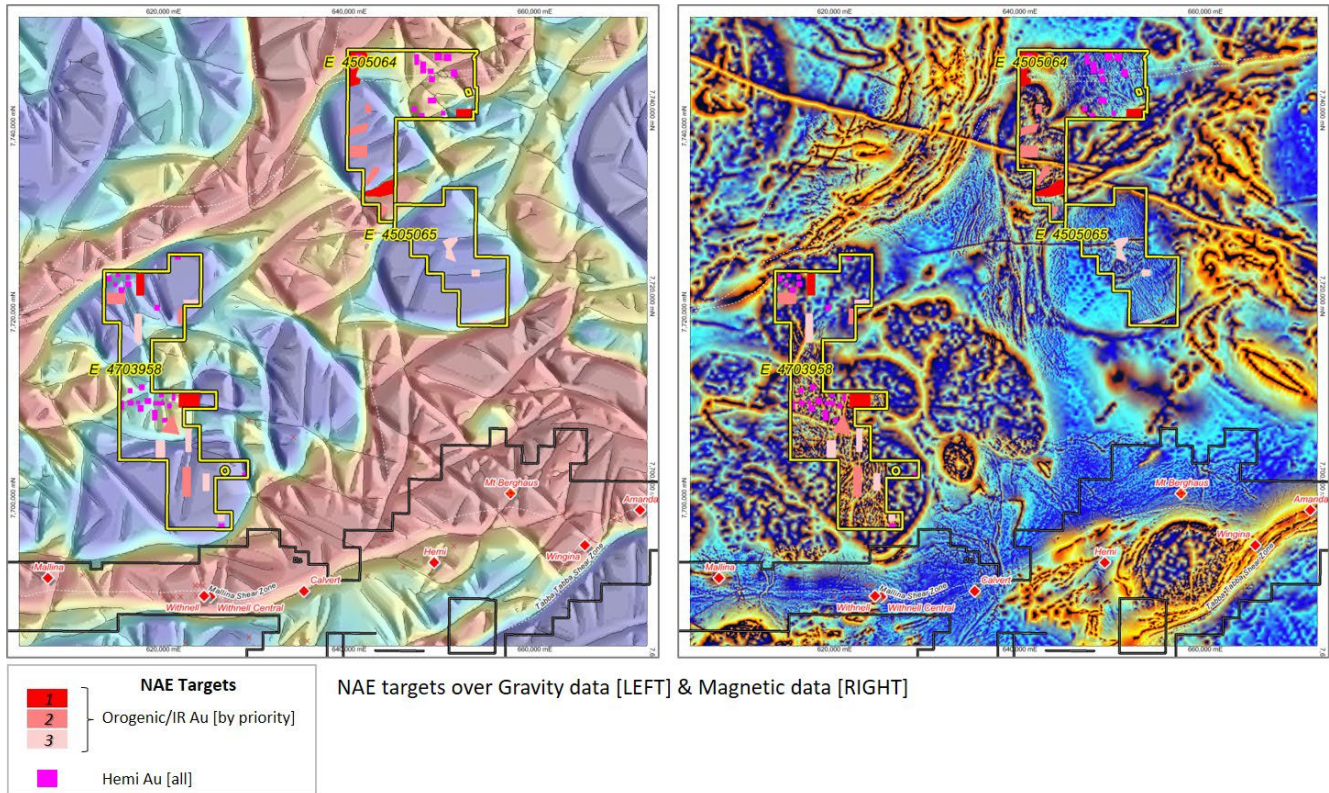

Figure 4: NAE targets over Brahman and Droughtmaster Gold Projects.

Rare Metal Pegmatites

NAE's recent helicopter supported field work confirmed the presence of historically mapped occurrences of rare metal pegmatites with recorded Lithium-Tantalum-Tin-Beryl mineralisation at several locations along strike to the southwest of the Wodgina-Mt. Francisco Lithium-Caesium-Tantalum (LCT) Pegmatite Belt. Historical reports indicate small scale production of tin, tantalum and beryl. None of the occurrences have been previously drill tested. Assessment of all project areas for additional rare metal pegmatites is ongoing. Photos 2 and 3 below show the outcropping quartz core of a zoned pegmatite located in the Quartz Hill Project. Figure 5 presents a schematic model of mineral zonation within rare metal pegmatites.

Photo 2 & 3: Lithium-Tantalum-Tin-Beryl Pegmatites showing Quartz core zone at Quartz Hill Project.

Figure 5. Rare Metal Pegmatite Zonation – Schematic Model after Cerny et al 1993

In late November, the Company announced that it had commenced its Phase 2 drilling programme at its Central Pilbara Gold Projects. Refer Figures 1 and 6. ([ASX Announcement 25 November 2021](#))

The program was designed to follow-up high priority targets defined from its Phase 1 drilling in conjunction with a pipeline of new targets identified from recent data synthesis and proprietary data filtering technology undertaken on multiple geophysical data sets by Fathom Geophysics. (Refer [NAE ASX release 28 October 2021](#)).

In late December, the Company announced that the first 1500m of the Phase 2 drilling programme had been completed. Refer to Figures 1 and 6. ([ASX Announcement 22 December 2021](#))

The Company engaged Strike Drilling to undertake the program and was committed to completing as much of the planned drilling as possible prior to the closure of the 2021 field season.

Helicopter and ground supported regional and prospect scale soil geochemical surveys over priority areas at all Projects to further refine additional targets ahead of follow-up drill testing.

Photo 4: Strike Drilling T450 Aircore/Reverse Circulation Rig

Initial focus was on the Brahman and Droughtmaster Gold Projects (E47/3958 and E47/5064/5065 respectively) which are located north of, and within ~50km of De Grey Mining's (ASX:DEG) Mallina Gold Project and the recent Hemi gold discovery. The first 1500m of the planned 5000m were completed prior to closure of the 2021 field season. (Refer to Figures 1 and 6.)

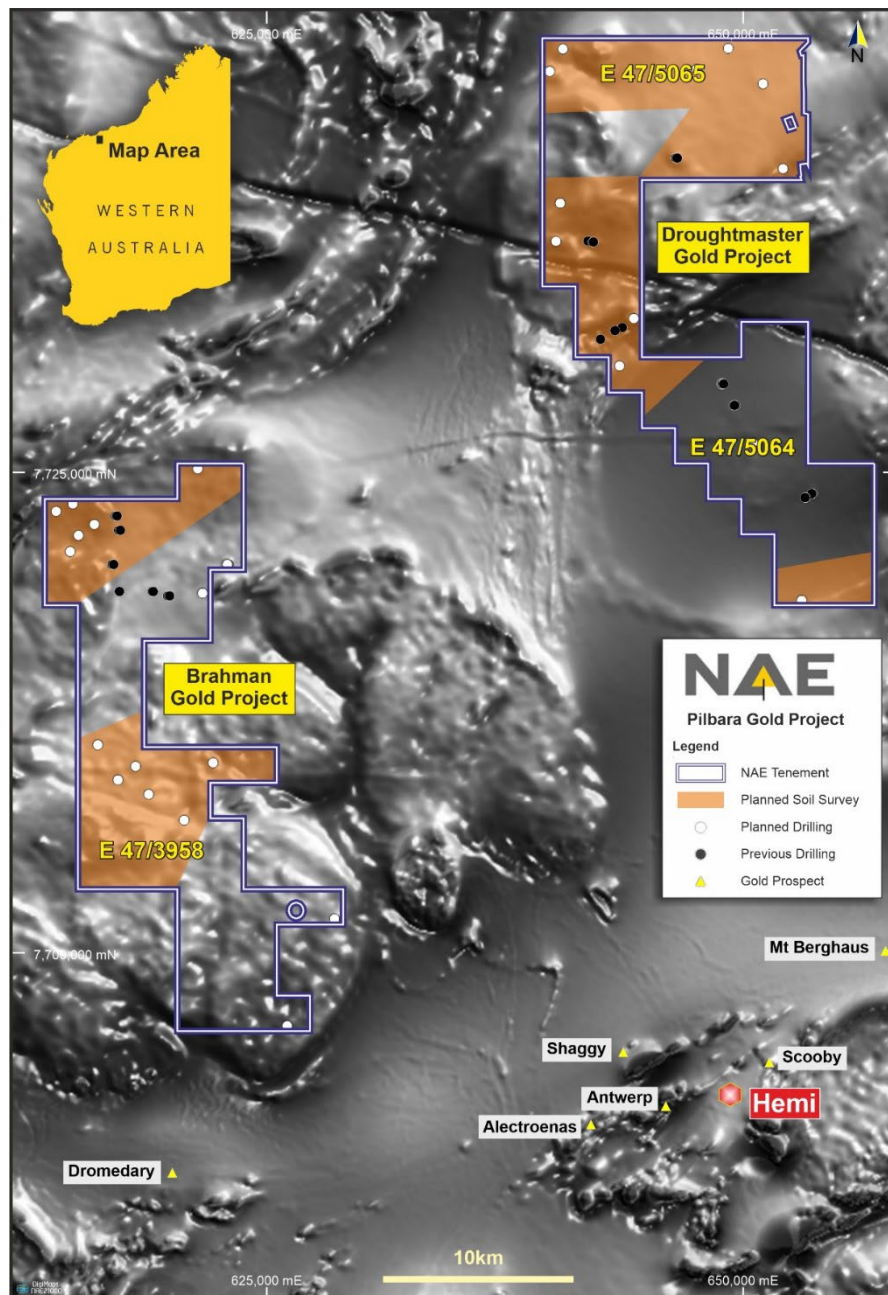

Figure 6: Location of NAE's Central Pilbara Brahman and Droughtmaster Gold Projects over regional grey scale aeromagnetics showing planned drilling and areas of soil geochemical surveys.

Next Steps

Ongoing target generation, refinement and prioritisation will be underpinned by results obtained from the current phase of exploration activity including surface geochemical surveys, drilling, continued assessment of airborne and ground geophysical data.

NEW ZEALAND GOLD PROJECTS – LAMMERLAW GOLD PROJECT

In early October, the Company) advised that its technical team at Verum Group commenced work on its New Zealand project for the 2021/2022 summer season. ([ASX Announcement 6 October 2021](#)) Over October a further ridge and spur soil lines were completed along electromagnetic lineaments identified in April 2020 within the Lammerlaw Gold Project. NAE also obtained an access arrangement within the Otago Pioneer Quartz (O.P.Q.) Project to complete trenching along the O.P.Q mineralised trend.

Lammerlaw Ridge and Spur Soil Lines

NAE are continuing ridge and spur soil sampling along the northwest trending geophysical lineaments within prospecting permit 60544. These lineaments occur at boundaries between high and low response on airborne electromagnetic surveys that represent potential contact zones between pelitic (high response) and psammitic (low response) schist, see Figure 7. These contact zones preferentially host mineralised shearing and veining in other deposits in the Otago Schist.

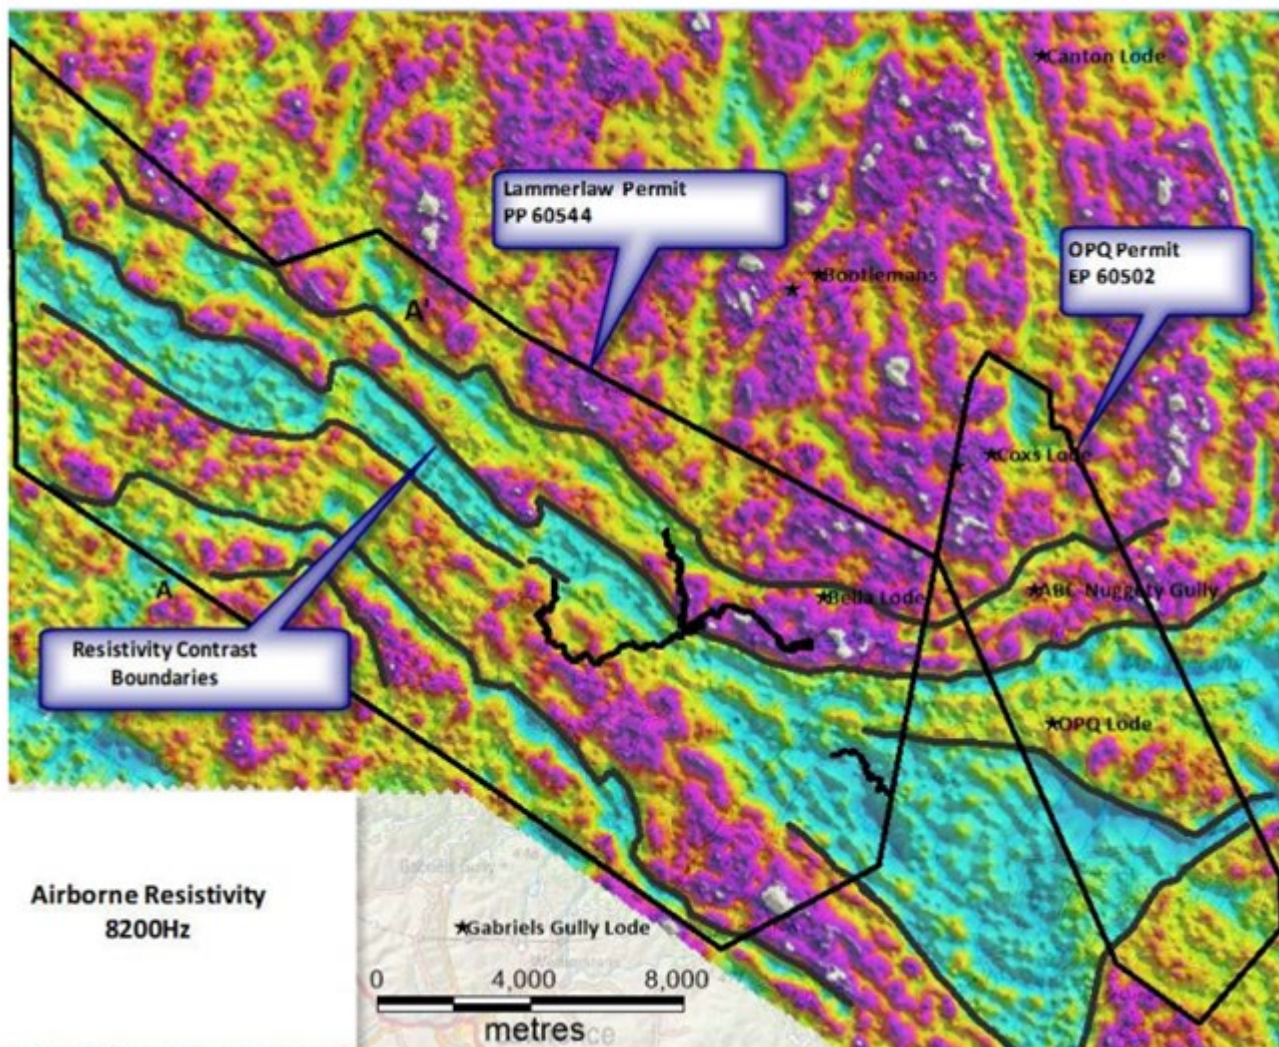

Figure 7: EM lineaments overlain by 8200HZ resistivity results

Eight ridge and spur soil sample lines at 50m spacings were completed in October 2021.

Of the eight lines, four are located on the northern EM lineaments previously sampled in the 2020/2021 field campaign where anomalous gold-arsenic trends were identified and NAE has applied for an exploration permit over ~75km², see NAE's [28 April 2021](#) and [20 July 2021](#) announcements. These four lines are located along strike to the northwest on Department of Conservation land which NAE holds a minimum impact activity consent to carry out the soil sampling.

The remaining four ridge and soil lines are located on the southern EM lineaments yet to be tested by NAE. The southern EM lineaments show a similar geophysical response to the northern EM lineaments where NAE has identified anomalous gold-arsenic zones from previous soil sampling.

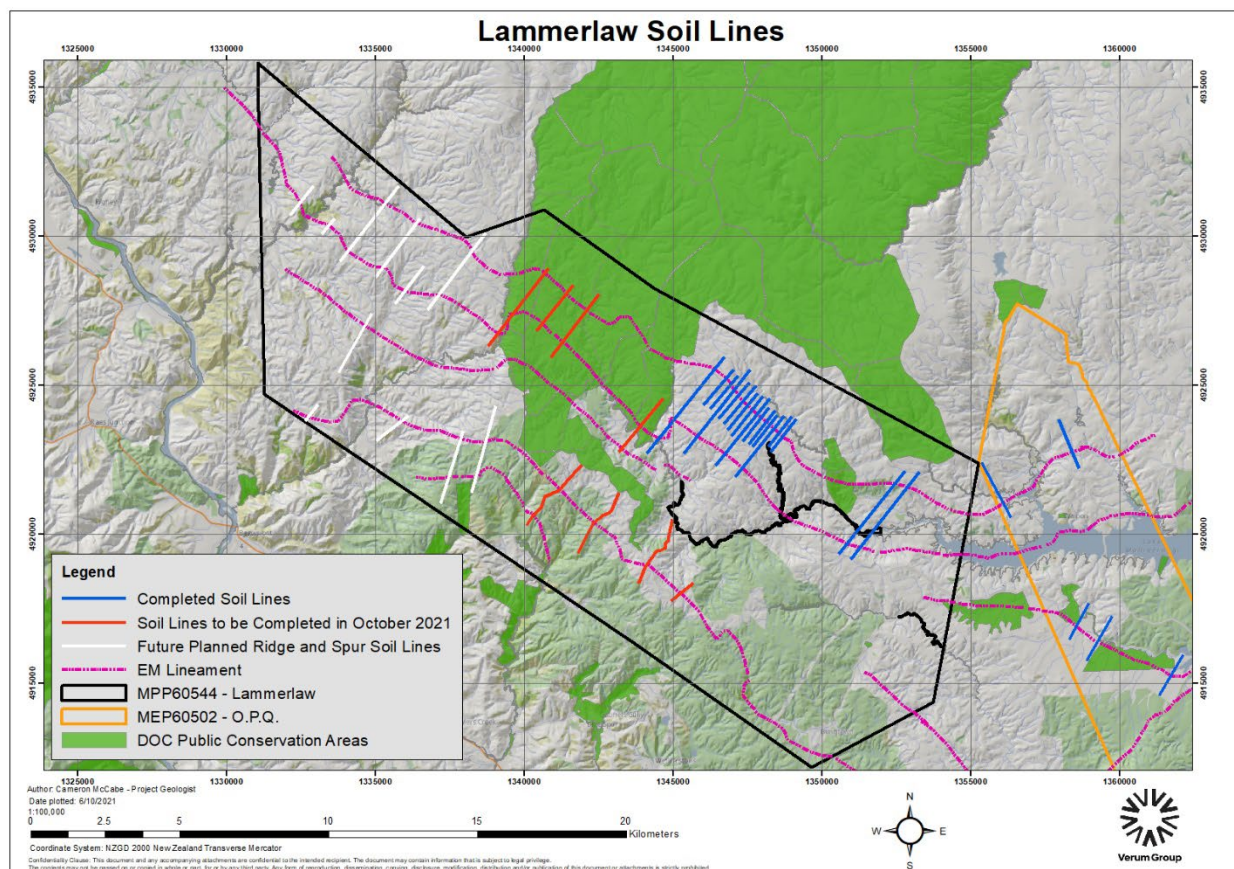

Figure 8: Planned Ridge and Spur Soil Lines at Lammerlaw

Further in fill soil lines will target Arsenic, Gold or base metals anomalies which are associated with low angle shear-host orogenic gold mineralisation.

NAE is also actively working towards gaining access to the land over the western side of the Lammerlaw Gold Project to complete the additional eleven (11) ridge and spur soil lines as shown in Figure 8.

Photo 5: Verum Group undertaking soil sampling at Lammerlaw

O.P.Q. Trenching

NAE has obtained an access arrangement to farmland in MEP60502 to complete trenching as part of Phase 2 exploration programme at O.P.Q. Trenching is planned along strike extension of the O.P.Q. trend identified from previous shallow percussion drilling completed in [2019](#). Trenching was planned in areas where basement schist is <2m from surface. Trenching commenced from mid-November after lambing was completed by the landowner and completed prior to the end of 2021.

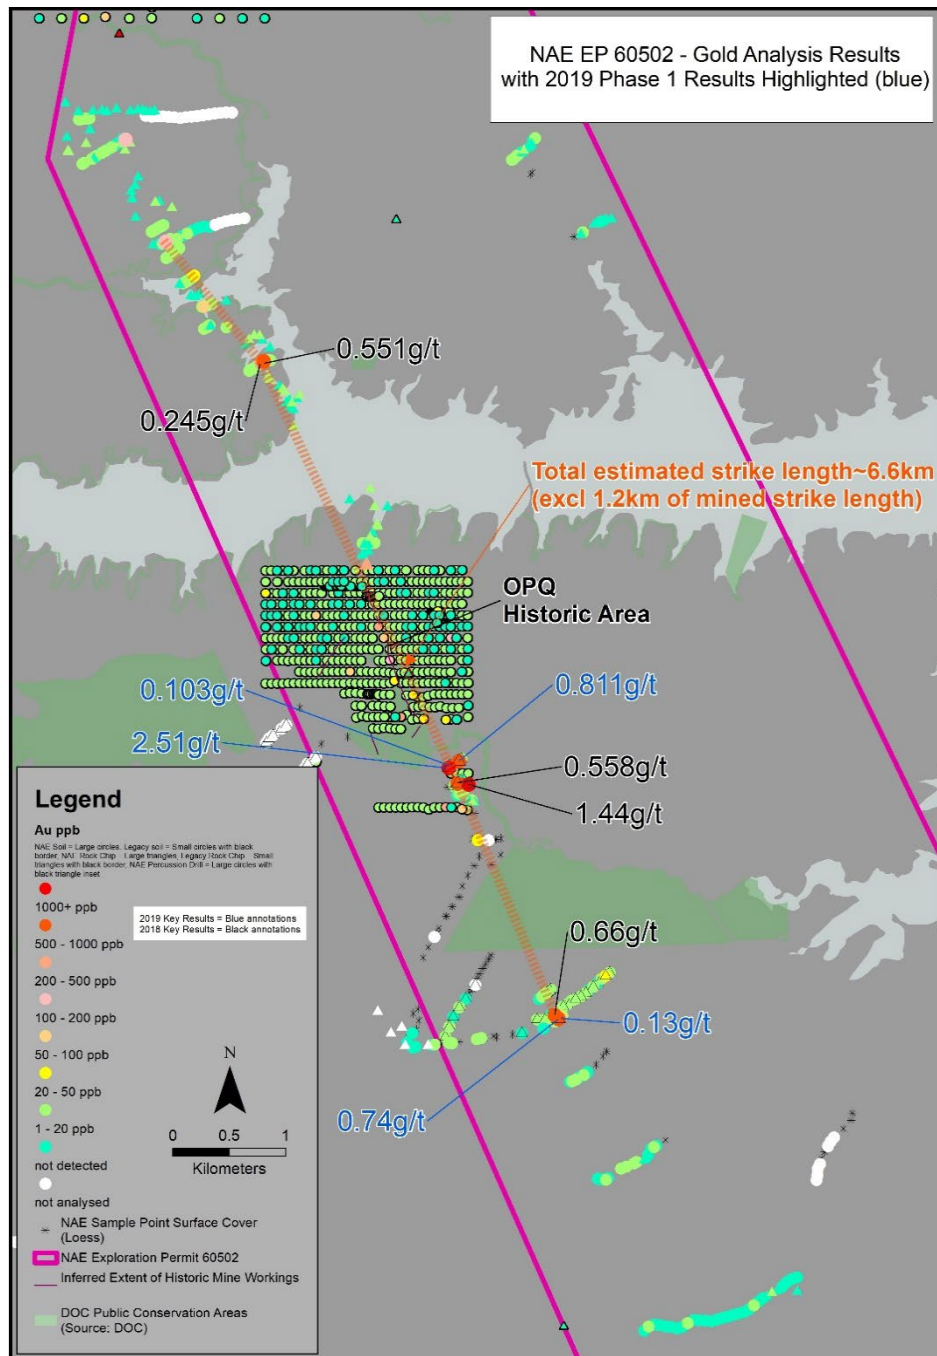

Figure 9: O.P.Q. estimated strike length. Taken from NAE ASX Announcement 12 December 2019

A follow up Phase 3 programme, comprising RC and/or diamond drilling (>50m deep holes), will be developed to test the depth of the southern strike extensions of O.P.Q.

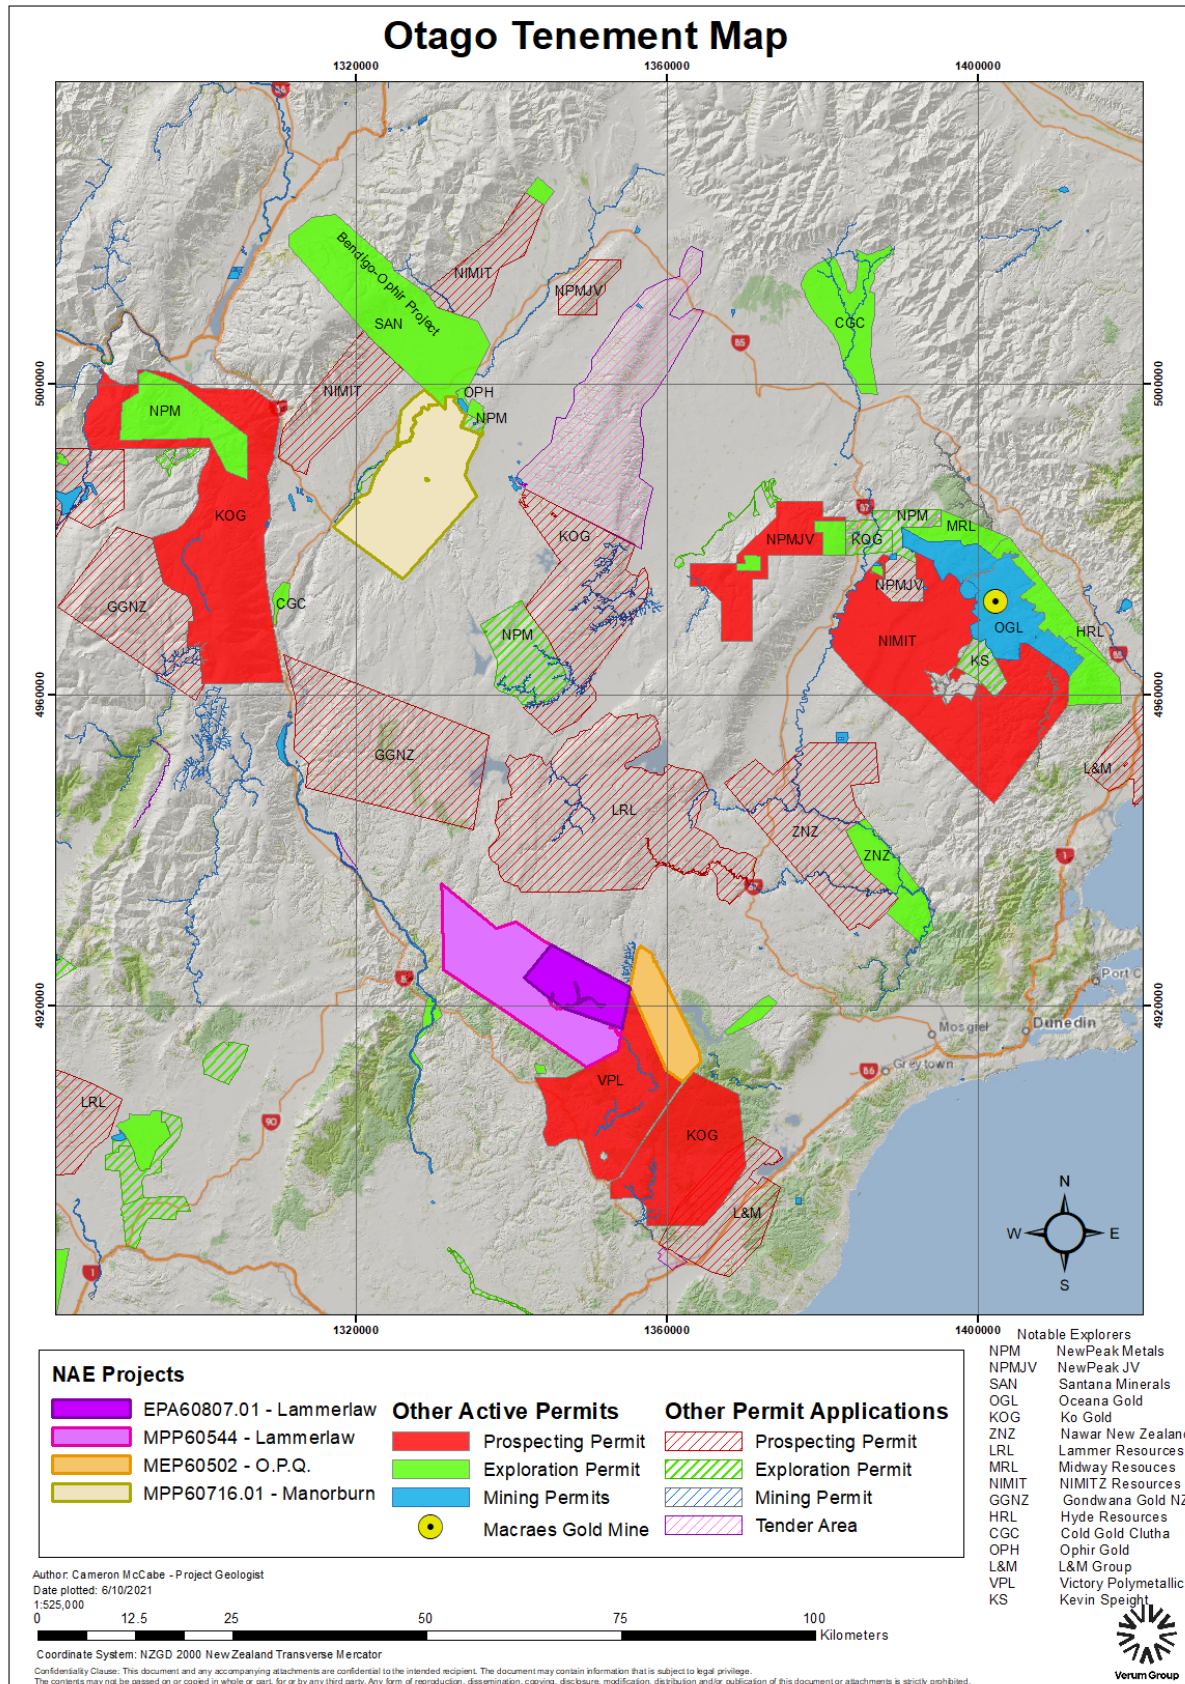

Figure 10: Otago Tenement Map showing NAE's projects and other notable explorers in the region

LOCHINVAR COAL PROJECT - SCOTLAND

The Lochinvar Coking Coal Project is located on the Scotland/England border. NAE holds exploration licences, conditional mining licences and option agreements over the Lochinvar area, Lochinvar North area and Lochinvar South area as shown in Figure 11. All licences are now in good standing and are 100% owned by NAE.

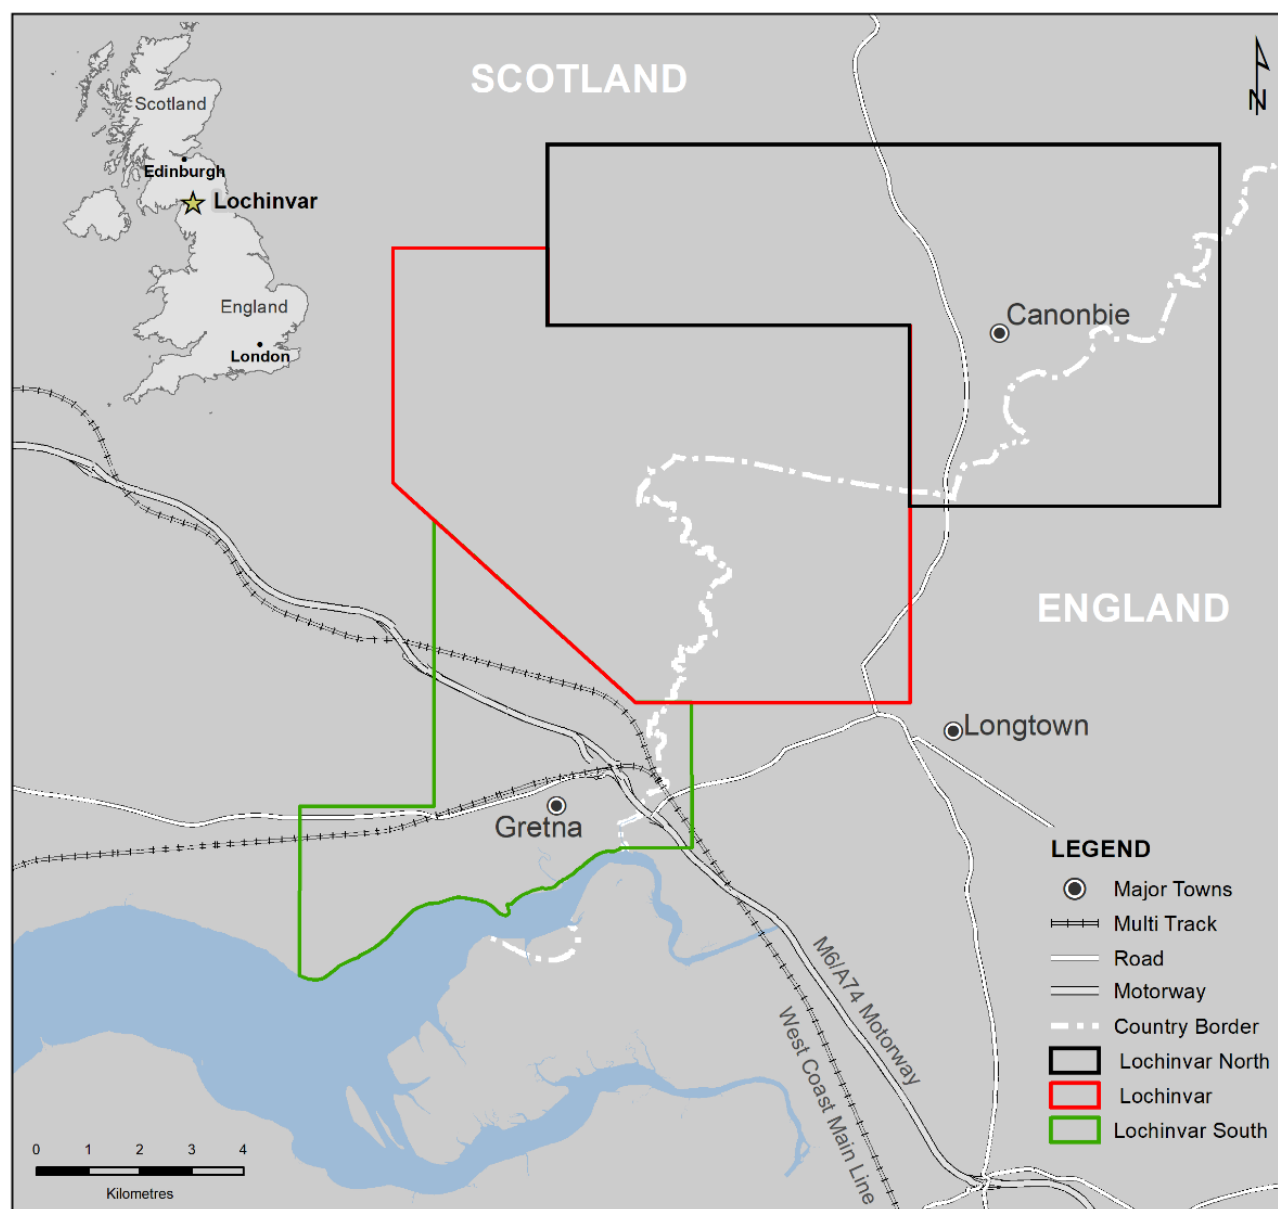

Figure 11: Location of the Lochinvar Licences

Corporate

Cash

The Company has cash reserves of A\$5.029 as at 31 December 2021.

Related Party Payments

In line with its obligations under ASX Listing Rule 5.3.5, the Company has advised in the Appendix 5B for the period ended 31 December 2021, that the only payments to related parties of the Company pertain to payments to Directors for fees, salary and superannuation.

Results of Annual General Meeting

The Company announced the results of the Annual General Meeting of shareholders held on 23 November. ([ASX Announcement 23 November 2021](#)) All resolutions considered were put to a vote on a Poll, called by the Chairman, and were passed.

Forward Looking Statements

This announcement contains 'forward-looking information' that is based on the Company's expectations, estimates and projections as of the date on which the statements were made. This forward-looking information includes, among other things, statements with respect to the Company's business strategy, plans, development, objectives, performance, outlook, growth, cash flow, projections, targets and expectations, mineral reserves and resources, results of exploration and related expenses. Generally, this forward-looking information can be identified by the use of forward-looking terminology such as 'outlook', 'anticipate', 'project', 'target', 'potential', 'likely', 'believe', 'estimate', 'expect', 'intend', 'may', 'would', 'could', 'should', 'scheduled', 'will', 'plan', 'forecast', 'evolve' and similar expressions. Persons reading this announcement are cautioned that such statements are only predictions, and that the Company's actual future results or performance may be materially different. Forward-looking information is subject to known and unknown risks, uncertainties and other factors that may cause the Company's actual results, level of activity, performance or achievements to be materially different from those expressed or implied by such forward-looking information.

Competent Person's Statement

OPQ Gold Exploration Project and Lammerlaw Prospecting Permit

The information in this report that relates to Exploration Results is based on information reviewed by Kyle Howie, who is an exploration geologist and is a Member of the Australian Institute of Geoscientists. Kyle Howie has over 25 years' experience in precious and base metal exploration and resource calculation including gold exploration and resource definition in the Otago region. Kyle Howie has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Kyle Howie consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Pilbara Gold Project

The information in this report that relates to Exploration Results is based on information reviewed by Steve Vallance, who is an exploration geologist and is a Member of the Australian Institute of Geoscientists (MAIG). Steve Vallance has over 30 years' experience in precious and base metal exploration including gold exploration and resource definition in the Pilbara region. Steve Vallance has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. He consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

In accordance with ASX Listing Rule 5.3.3, New Age Exploration Limited provides its list of exploration licences with its September quarterly activities report (as at 31 December 2021).

Licence No.	Project	Country	Area (km ²)	Licence Type	NAE Group % Interest
CA11/EXP/0515/N	Lochinvar	United Kingdom	67.5	Exploration Licence	100%

3.7	Transaction costs related to loans and borrowings		
3.8	Dividends paid		
3.9	Other (provide details if material)		
3.10	Net cash from / (used in) financing activities		

4.	Net increase / (decrease) in cash and cash equivalents for the period		
4.1	Cash and cash equivalents at beginning of period	5,767	6,376
4.2	Net cash from / (used in) operating activities (item 1.9 above)	(371)	(770)
4.3	Net cash from / (used in) investing activities (item 2.6 above)	(367)	(577)
4.4	Net cash from / (used in) financing activities (item 3.10 above)		

Consolidated statement of cash flows		Current quarter \$A'000	Year to date (6 months) \$A'000
4.5	Effect of movement in exchange rates on cash held		
4.6	Cash and cash equivalents at end of period	5,029	5,029

5. Reconciliation of cash and cash equivalents at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts	Current quarter \$A'000	Previous quarter \$A'000
5.1 Bank balances	518	1,257
5.2 Call deposits	4,511	4,510
5.3 Bank overdrafts		
5.4 Other (provide details)		
5.5 Cash and cash equivalents at end of quarter (should equal item 4.6 above)	5,029	5,767

6. Payments to related parties of the entity and their associates	Current quarter \$A'000
6.1 Aggregate amount of payments to related parties and their associates included in item 1	117
6.2 Aggregate amount of payments to related parties and their associates included in item 2	-
<p>Payments in 6.1 relate to Director fees, company secretary and consulting services.</p> <p><i>Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.</i></p>	

7.	Financing facilities <i>Note: the term "facility" includes all forms of financing arrangements available to the entity.</i> <i>Add notes as necessary for an understanding of the sources of finance available to the entity.</i>	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
7.1	Loan facilities		
7.2	Credit standby arrangements		
7.3	Other (please specify)		
7.4	Total financing facilities		
7.5	Unused financing facilities available at quarter end		
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		

8.	Estimated cash available for future operating activities	\$A'000
8.1	Net cash from / (used in) operating activities (item 1.9)	(371)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(365)
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(736)
8.4	Cash and cash equivalents at quarter end (item 4.6)	5,029
8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	5,029
8.7	Estimated quarters of funding available (item 8.6 divided by item 8.3)	6.83
<i>Note: if the entity has reported positive relevant outgoings (i.e., a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>		
8.8	If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1	Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A		
8.8.2	Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A		

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: N/A

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: ...28 January 2022.....

Authorised by:With the authority of the Board.....

(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – e.g., Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
