YOJEE DELIVERS

- **Yojee has begun its collaborative economy delivery service in Singapore through its registered partners.**
- **Delivering for Business to Business, Business to Consumer and On demand for consumers in an ecommerce market worth over USD \$1 Billion.**
- **Offering up to 2 days faster delivery times than competitors.**

Yojee Limited (ASX: YOJ) ("**Yojee**" or "**the Company**") is pleased to announce that it has now commenced its freight movement operations nationwide through its partners in Singapore. Yojee is a pioneering platform technology company delivering powerful logistics and supply-chain management capabilities via its Artificial Intelligence (Ai) software to South East Asia and Australia.

Yojee initially offers 3 hour and same day delivery with very competitive pricing and enhanced next generation user experience, which is best in class for senders, delivery partners and customers.

"In Singapore we see a USD \$1 Billion dollar ecommerce market growing to USD \$5.4 billion in 2025, that has not yet leveraged artificial intelligence or machine learning to optimize the time, user experience and cost of delivery." said Managing Director Ed Clarke.

"The consumer experience in ecommerce no longer finishes on site, as consumers are looking to receive instant gratification from purchases, putting legacy logistics models in a difficult position. Online companies are now looking for the edge in delivery time, so the logistics provider that delivers fastest and with the most transparency will win. Legacy logistics is just not designed for this type of behavior, as the legacy model requires warehousing and sorting overnight and delivery in following days. "

By applying machine learning and Ai, Yojee can organise and cluster using algorithms before pickup to remove the need for expensive and time draining warehousing. Through more deliveries and data Yojees Autonomous Ai engine gets smarter and smarter and faster and faster as the system learns and improves its decision making, meaning deliveries can soon be within just hours of purchase, not days.

The benefits of this also flow on to the recipient side, as expected delivery windows can become minutes and not the hours or even an entire day window currently offered by existing companies. On top of this, we are unique in that our software is autonomous, which saves hundreds of thousands of dollars a year in operator labor costs and even more in routing optimization at scale.

Yojee has best in class, next generation iOS and Android Apps and web based booking capabilities including bulk job functionality suitable for ecommerce designed to simplify the delivery process and provide real time. December is being used to deliver for selected ecommerce and business senders before the company pushes its sales and marketing program to become the market leader and fastest ecommerce fulfillment and on demand service provider in Singapore before rolling out across the region in 2017.

Yojee offers the same autonomous software in a licensing model to optimize existing logistics organisations with the option for that organization to also access Yojee generated jobs to fill their empty capacity and legs.
