Non-Executive Director

Technology materials company Talga Resources Ltd ("Talga" or the "Company") (ASX Code: TLG) is pleased to announce the execution of a non-binding memorandum of understanding ("MOU") with Heidelberg Cement AG ("Heidelberg") – a German based multinational building materials producer and world leader in concrete products.

Talga and Heidelberg have entered into the MOU in order to jointly explore business opportunities associated with Talga's graphite and graphene based materials in carbon enhanced concrete applications for the building and construction sector.

Talga Managing Director Mark Thompson commented, *"We are delighted with the opportunity to work with Heidelberg and its engineering and innovation department. Graphene and graphite enhanced cements/concretes create opportunities for conductive, stronger and more sustainable building and construction products. A joint test program with the World's largest concrete aggregate producer (Plus world No.2 in cement and No.3 in ready mixed concrete) is a great validation of that opportunity."*

This MOU is a clear demonstration of our commercialisation strategy in action and follows previous industry agreements in the coatings and energy storage sectors."

About Heidelberg

Heidelberg Cement AG is one of the world's largest building materials companies. With the 2016 takeover of the Italian cement producer Italcementi, HeidelbergCement became the world number 1 in aggregates production, number 2 in cement, and number 3 in ready-mixed concrete. The core activities of HeidelbergCement include the production and distribution of cement and aggregates, the two essential raw materials for concrete. HeidelbergCement consists of approximately 60,000 employees in locations across 60 countries and generated €15.2B revenue in 2016.

About Talga

Talga Resources Ltd ("Talga") (ASX: TLG) is a technology materials company enabling stronger, lighter and more functional graphene and graphite enhanced products for the coatings, battery, construction and carbon composites markets. Talga has significant advantages owing to 100% owned unique high grade conductive deposits in Sweden, a test facility in Germany and in-house product development and IP. Advanced testing is underway with a range of corporations including industrial conglomerate Chemetall (part of BASF), Tata, UK listed Haydale and Zinergy and German based Jena Batteries.
