

# SUBSTANTIAL AIRCORE EXPLORATION DRILLING CAMPAIGN UNDER WAY

## SUMMARY

- +20,000m aircore exploration program at the Redcliffe Gold Project has commenced
- 13 new targets to be tested
- Program will take two to three months to complete

Emerging Goldfields explorer NTM Gold Ltd (ASX: NTM) (“NTM” or “the Company”) is pleased to announce that a large aircore drilling program has commenced at its Redcliffe Gold Project located near Leonora, Western Australia. The aircore drilling will test early stage targets as part of the Company’s new exploration strategy to make new discoveries across the underexplored 170km<sup>2</sup> Redcliffe area.

The aircore program will involve at least 20,000m of drilling to test two target types:

- Tier 1 - following up historic drilling; and
- Tier 3 - conceptual geological targets.

The drilling will take two to three months to complete and is a key early step in adding to our existing 538koz resource base (see Appendix I).

NTM is using a new track-mounted Ausdrill aircore rig. The new rig has superior drilling capacity to aircore rigs previously used on the project and should enable holes to be drilled deeper to better test the targets.

### NTM Gold Managing Director Andrew Muir commented:

*“Our first aircore drilling program for 2018 is an exciting time for NTM and our shareholders. The program is part of the focus on exploration and discovery to test a number of new targets that have had little to no previous work. The substantial size of the aircore program will see a large number of prospective areas drilled over the next few months. I look forward to updating shareholders in due course.”*

## About NTM

NTM Gold Ltd (ASX: NTM) is an emerging Perth-based explorer focused on the Leonora region, in the heart of Western Australia's Eastern Goldfields. The Leonora Laverton Terrane has produced more than 50 million ounces of gold historically and is considered to be one of Australia's most prospective provinces. NTM owns 100% of the Redcliffe Gold Project, a major developing project with established resources close to existing infrastructure and mines (e.g. St Barbara, Saracen Mineral Holdings and Red 5).

The Redcliffe Gold Project is a 170km<sup>2</sup> tenement holding covering the Mertondale Shear Zone over some 30km length. The Mertondale Shear Zone is an interpreted major crustal structure important for gold mineralisation. Exploration work has identified and delineated the Golden Terrace South (GTS) and Kelly prospects in the southern section of the Project, and the Redcliffe and Nambi prospects in the northern section. First-pass regional exploration in 2017 resulted in new discoveries Bindy, KT and Triple 2.

NTM has an experienced team who are committed to developing the Redcliffe Gold Project. An aggressive exploration program is under way, which has delivered drilling success across much of the Redcliffe project area. NTM's ambition is to upgrade the Redcliffe resource base to fast-track commercialisation options.

## Competent Persons Statement

The information in this report that relates to Exploration Results, is based on information compiled and/or reviewed by Mr. Lyle Thorne who is a Member of The Australasian Institute of Mining and Metallurgy. Mr. Thorne is a full-time employee of NTM and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity they are undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr. Thorne consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

## Appendix I

### REDCLIFFE RESOURCE

NTM released the Estimate of Minerals Resources to the ASX on 13 June 2018, containing the statements and consent referred to in ASX Listing Rule 5.22.

NTM confirms that it is not aware of any new information or data that materially effects the information included in the announcement of 13 June 2018 and that all material assumptions and technical parameters underpinning that estimate continue to apply and have not materially changed.

Table 1: Redcliffe Project Resource Estimate Summary – 0.5g/t Lower Cut-Off

Deposit	Indicated			Inferred			Total		
	T	g/t Au	Oz	T	g/t Au	Oz	T	g/t Au	Oz
Oxide	403,287	2.13	27,572	2,348,470	0.93	70,442	2,751,757	1.11	98,013

Notes to Table 1 and 2:

1. Totals may differ due to rounding, Mineral Resources reported on a dry in-situ basis.
2. The Statement of estimates of Mineral Resources has been compiled by Mr Andrew Bewsher who is a full-time employee of BMGS and a Member of the AIG. Mr Bewsher has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity that he has undertaken to qualify as a Competent Person as defined in the JORC Code (2012).
3. All Mineral Resources figures reported in the table above represent estimates at 1st June 2018. Mineral Resource estimates are not precise calculations, being dependent on the interpretation of limited information on the location, shape and continuity of the occurrence and on the available sampling results. The totals contained in the above table have been rounded to reflect the relative uncertainty of the estimate. Rounding may cause some computational discrepancies.
4. Mineral Resources are reported in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (The Joint Ore Reserves Committee Code – JORC 2012 Edition).
