

## UPDATE ON PROGRAMME WORKS

**Astro Resources NL is an Australian-based mineral resources company focused on the commercial development and production of economically and environmentally sustainable mineral sands deposits, diamonds, gold and other minerals.**

Astro Resources NL (**ARO** or the **Company**) is pleased to provide the following update in relation to the following projects:

### ***Mineral Sands***

As previously announced on 8 February 2019, the Company has completed an infill drilling programme for the purposes of obtaining an indicated resource on its Governor Broome South East project.

Heavy mineral separation has commenced on more than 2000 samples, with splits of the samples having been retained for later use for bulk test-work. The resource upgrade will include a mineralogical study of the intersected heavy mineral mineralisation.

At this stage, the Board is anticipating the announcement of the revised resource on or before 31 July 2019.

### ***Needles - Gold***

As announced on 10 August 2018, the Company is in the process of obtaining a maiden inferred resource for its Needles gold project based in Nevada, USA.

Due to unexpected delays from the US Government shutdown earlier in the quarter as well as poor weather restricting access to the site, the Company is expecting that the permits for the RC Drilling programme will be received in late April, with drilling to commence shortly thereafter.

Further updates will be provided as they become available.
