EXPRESSIONS OF INTEREST TO BUY "WASTE" BY-PRODUCTS FROM THE WINCHESTER PROJECT

Korab Resources Ltd ("Korab", or "Company") (ASX: KOR) and its subsidiaries ("Korab Group") are pleased to provide this update in respect of the Winchester magnesium carbonate project located near Darwin in the Northern Territory.

BACKGROUND

As previously advised on 18 January 2019 the Company has been progressing discussions and negotiations with potential buyers of raw magnesium carbonate rock, caustic calcined magnesite (CCM), and dead burned magnesite (DBM) for some time. This has culminated in the signing of an agreement with ZM Ropczyce reported to the market on 17 January 2019.

As reported to the market on 12 September 2018, the Company intends to produce raw magnesium carbonate rock which will be crushed and screened on-site at the Winchester quarry, as well as high grade CCM, and DBM which will be processed off-site using toll-processing through kilns owned by third-parties. Consequently the production of CCM and DBM will not require additional capital investment.

The targeted volumes of production and sales of DSO magnesium carbonate rock and toll-processed CCM, and DBM as outlined in the report of 12 September 2019 have not materially changed. The Company confirms that all material assumptions underpinning the production target, or the forecast financial information derived from a production target, in the initial public report titled "*ADDITIONAL INFORMATION - WINCHESTER MAGNESITE FEASIBILITY STUDY UPDATE*" released to the market on 12 September 2018 continue to apply and have not materially changed.

The report released on 12 September 2019 can be accessed by using the following link:

<https://www.asx.com.au/asx/statistics/displayAnnouncement.do?display=pdf&id=02021411>

EXPRESSIONS OF INTEREST

Korab Group is very pleased to advise that it has unexpectedly received several expressions of interest to buy up to 60,000 tonnes per year of low grade CCM and low grade DBM which could be produced (using kilns owned and operated by third parties on toll-processing basis) from the fines resulting from crushing and screening of raw magnesium carbonate rock and from the other low grade material. The fines resulting from crushing and screening and the low grade magnesium carbonate rock were considered by us until now to be a "waste" product.

This new revenue stream would be in addition to the sales of high grade raw rock, CCM and DBM currently being negotiated, and the sales of high grade DBM to ZM Ropczyce reported on 17 January 2019.

POTENTIAL ECONOMIC IMPACT

The potential economic impact of this new product stream is currently being assessed but a high level preliminary assessment indicates a positive impact. The mining and crushing/screening cost have already been absorbed into the overall costings of the Winchester project operations reported earlier and the cost of toll-processing of this

material is relatively low. Therefore the additional revenue stream from processing and sales of what was previously considered a “waste” product appears attractive.

The discussions with interested parties are ongoing but are incomplete and details are confidential. There can be no certainty that any agreement or agreements can be reached or that any transaction will eventuate from these discussions. No commercial terms have been agreed between the parties. Accordingly, no investment decision should be made on the basis of this information. Korab will advise the market if and when an agreement or agreements have been reached.

The Company aims to have the Winchester project in production in the second half of 2019, although this goal is subject to the quarry operator (Ausmag Pty Ltd, a wholly owned subsidiary of Korab) securing all required permits, and approvals, and completing the arrangements with relevant stakeholders.

LOGISTICS

With regard to logistics, Korab reported on 30 November 2018 that it has expanded the agreement with the operator of Darwin Port to 800,000 tonnes per year to allow for additional volumes of magnesium carbonate rock to be shipped for toll-processing. This rock will be shipped through Darwin Port in addition to DSO magnesium carbonate rock.

FUNDING

With regard to funding, Korab expects to fund the cost of the development of the quarry, quarrying costs, logistics, and the costs of toll-processing, as reflected in the announcement dated 12 September 2018, from the prepayments for the offtakes, although other funding avenues (one of which is capital co-operation with an offtake partner, or partners) are also being explored and evaluated. The Company confirms that all material assumptions underpinning the production target, or the forecast financial information derived from a production target, in the initial public report titled “*ADDITIONAL INFORMATION - WINCHESTER MAGNESITE FEASIBILITY STUDY UPDATE*” released to the market on 12 September 2018 continue to apply and have not materially changed.

Further updates regarding the Winchester magnesium carbonate project will be provided to the market as and when required.

ABOUT WINCHESTER

The proposed magnesium carbonate quarry at Winchester is located 2 km from the regional centre of Batchelor some 70km south of Darwin along Stuart Highway. Please refer to Figure 1 for details of the location of the proposed Winchester magnesium carbonate quarry, and Korab Group's various mineral tenements in the area. Deposit is at shallow depth and is covered by a thin layer (few meters) of unconsolidated clay and gravel (see Figure 2). Winchester magnesium carbonate rock can be quarried using drill and blast, shovel and truck method.

DISCLAIMER AND CAUTIONARY STATEMENT

Forward-looking statements are statements that are not historical facts. Words such as "expect(s)", "expected", "feel(s)", "believe(s)", "will", "may", "anticipate(s)", "should", "envisage(s)" and similar expressions are intended to identify such forward-looking information. This information includes, but is not limited to statements regarding future exploration results, resources, or reserves, and production. Anyone reading this report is cautioned not to place undue reliance on these forward-looking statements. All of such statements are subject to risks and uncertainties (many of which are difficult to predict and which generally are beyond the control of the Company) that could cause actual results to differ materially from those expressed in, or implied or projected by, the forward-looking information and statements. These risks and uncertainties include, but are not limited to: those relating to the interpretation of exploration results (including drill results), the geology, grade and continuity of mineral deposits and conclusions of economic evaluations; risks relating to possible variations in reserves, grade, mining dilution, ore loss, and recovery rates; risks relating to changes in project financial and technical parameters; risks relating to the potential for delays in exploration programs, project evaluation/review, completion of feasibility studies and project development; risks related to commodity prices and foreign exchange rate fluctuations; risks related to failure to secure adequate financing on a timely basis and on acceptable terms; risks related to delays in obtaining governmental, or other permits and approvals; risks related to security of tenure; and other risks and uncertainties related to the Company's prospects, properties and business strategy. Any forward-looking information contained in this report is provided as of the date of this report. Except as required under applicable listing rules and securities laws, the Company does not intend, and does not assume any obligation, to update this forward-looking information.
