

## RIU Explorers Conference Guide Clarification

Caspin Resources Limited (ASX: CPN) (“**Caspin**” or the “**Company**”) refers to the RIU Explorers Event Guide published in The Australian newspaper on 8 February 2023 (“the Guide”). Caspin is a presenter at the RIU Conference to be held next week in Fremantle between 14-16 February 2023 and information on the Company was included in the Guide.

The Company advises that the exploration results referred to in the Guide can be found in the Company’s ASX announcement dated 14 December 2022 and entitled 'Plus 10% Copper at Surface, Mount Squires Project' (“Announcement”). A copy of the Announcement is available at [www.asx.com.au](http://www.asx.com.au).

The Company confirms that it is not aware of any new information or data that materially affects the exploration results included in the Announcement. The Competent Person for the Announcement was Mr Greg Miles. Caspin confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the Announcement.

This announcement is authorised for release by the CEO of Caspin Resources Limited.

## ABOUT CASPIN

Caspin Resources Limited (ASX Code: **CPN**) is a new mineral exploration company based in Perth, Western Australia. Caspin has extensive skills and experience in early-stage exploration and development. The Company is actively exploring the Yarawindah Brook Project in Australia's exciting new PGE-Ni-Cu West Yilgarn province and the Mount Squires Project in the West Musgrave region, one of Australia's last mineral exploration frontiers.

At the Company's flagship Yarawindah Brook Project, recent drilling campaigns at Yarabrook Hill have made new discoveries of PGE, nickel and copper sulphide mineralisation. Meanwhile, the Company continues to bring new targets to drill readiness by collecting geophysical and geochemical data across the project.

At the Mount Squires Project, Caspin has identified a 50km structural corridor with significant gold mineralisation and potential copper porphyry prospects. The Company will conduct further soil sampling and reconnaissance drilling along this trend. Caspin will concurrently continue to evaluate the potential for Ni-Cu mineralisation along strike from the One Tree Hill Prospect and Nebo-Babel Deposits.
