FURTHER SAMPLES SHIPPED TO LABORATORY IN SOUTH AFRICA

HIGHLIGHTS:

- **Samples shipped form part of the results of the current 300-hole RC Air core infill and extension drilling program.**
- **To date approximately 45% of the program samples have been shipped.**
- **Balance of samples are being treated in the Company's onsite laboratory and are expected to be shipped in the coming weeks.**
- **The results of the infill and extension drilling program will provide an upgraded JORC compliant mineral resource estimate for a core portion of the project mineral resource.**

Titanium Sands Limited ("TSL" or "The Company") is pleased to confirm regulatory approvals have been received and shipment of a further 702 samples from Colombo Port, Sri Lanka to Cape Town, South Africa has occurred. Samples are expected to arrive in South Africa in the coming week.

The samples shipped are part of the Company's RC Air core drilling program in Sri Lanka being managed by the Geological Survey and Mines Bureau Technical Services Division ("GSMBTS") (ASX:TSL 28/01/2022).

Sample preparation by GSMBTS was completed in the Company's onsite laboratory and shipment to the reporting laboratory in South Africa will allow for heavy mineral analysis, the results of which will partly form the basis of the updated resource estimate for the project. The balance of samples are expected to be shipped in the coming weeks as the onsite laboratory work concludes.

Ends-

The Board of Directors of Titanium Sands Ltd authorised this announcement to be given to the ASX.
