

Quarterly Activities Report For The Period Ending 30 June 2023

Highlights for the quarter ending 30 June 2023

Magnetite Range Project (MRP)

- RCP 2022 infill drilling (61) head assays have been received, update geology and resource modelling has commenced
- Metallurgical & Resource Davis Tube Recovery (DTR) test work for Program(s) one, two and three results have all been received
- MRP 1 :5K geological mapping survey commenced during March 2023 over the MRP project, final report and geology map has been received and will be consolidated into the new model
- Heritage surveys over highlighted exploration target areas have been completed, final report is pending
- Environmental surveys have been completed over highlighted exploration target areas; final report is pending
- A Hydrogeological field survey and desktop assessment over MRP commenced during the reporting period, final outcomes are pending
- A high-level conceptual mine study and gap analysis has commenced over the MRP project area

Norseman Gold Project

- RCP infill drilling has been validated and reviewed over the Norseman project, assays have been returned and modelling has commenced
- Geology model updates will aid the next phase of drill orientation and planning
- A WAMEX review prioritised several historical reports over the project area, selected historical geology maps have been digitised and will be used to help update the geology model and next phase of drill targeting
- Rehabilitation of 2022 RCP has been completed

Capital Structure

Ordinary Fully Paid Shares at 30 June 2023	473,271,283
12 month high-low	\$0.05 - \$0.006

Directors & Management

Yuzi (Albert) Zhou	Executive Chairman
Dian Zhou He	Deputy Chairman
Jun Sheng Liang	Non Executive Director
Jie You	Non Executive Director
Rob Allen	Company Secretary

Top 10 Shareholders	No.	%
Rich Mark Development (Group) Pty Ltd	313,245,410	67.2%
Xingang Resources (HK) Limited	98,026,518	21.03%
Grandmaster Fortune	21,563,603	4.63%
Mr Bin Cui	10,115,470	2.17%
Sino Oriental International Limited	10,000,000	2.15%
Brilliant Service Pty Ltd	5,000,000	1.06%
Mrs Li Li Zhao	2,102,500	0.45%
Invia Custodians	852,000	0.18%
Dong Liang	583,959	0.13%
Jie You	500,000	0.11%

Corporate

In conjunction with majority shareholder Rich Mark Development Group and Xingang Resources (HK) Limited the Company continues to assess investment opportunities and projects for acquisition or development.

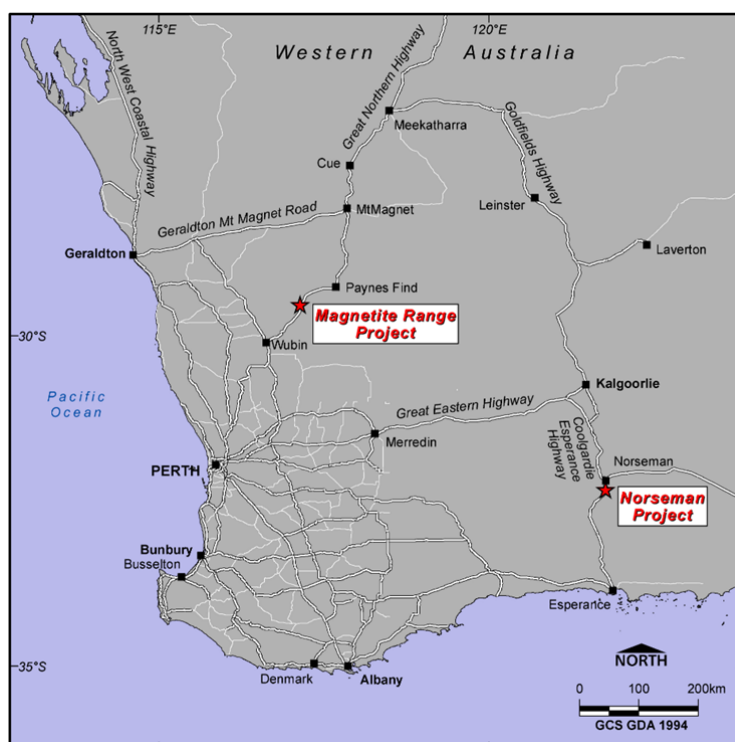

Figure 01 - Accent Resources Project Location Map

Magnetite Range Iron Ore Project (ACS 100%)

The Company's wholly owned Magnetite Range Project is located in the Midwest region of Western Australia, immediately adjacent to the Extension Hill iron ore mine, and contains a total JORC resource of **434.5 Mt at 31.4% Fe** at 15% weight recovery cut off, as announced to the ASX on 28 November 2012.

A total of 61 RCP infill drill holes for a total of 6732m (MGRC0153 – MGRC0213) were completed during December 2022. Four batches of assays were dispatched to the labs for XRF analysis between 5th October and 2nd November 2022. All final head assays have been received during the reporting period and reported in a separate ASX announcement titled "*Magnetite Range Project – Exploration Update*" dated 24th March 2023.

The RCP drill holes were designed to:

- Infill phase one 2021 RC drilling;
- Examine potential for depth continuity below existing drilling along strike;
- Test any lateral extension drilling further NW and along strike;
- Increase confidence in geological grade modeling and
- to support an updated Mineral Resource Estimate 'MRE' of the Julia deposit

An update to the geology model and current resource estimate over the Julia deposit is continuing.

A total of three Davis Test programs have been completed across the Julia and Robb Prospect areas. Samples were processed from Upper and Lower BIF units with inclusion of Oxide, Transition and Fresh zones.

Programs one (10) and two (332) used RC drill samples recovered from Julia deposit from the 2021 RC drilling program. Program one (10) was aimed at confirming the grind size to be used for the RC DTR samples in program two. Program two consisted of 332 composite RCP 2021 drill samples from across the Julia resource area.

Program three comprised two separate submissions recovered from the 2022 RCP drilling program. The first submission (70) was from the drilling over Julia deposit, the second submission (101) was from drilling over Robb deposit. Both submissions were processed at Bureau Veritas labs and included Satmagan analysis.

Program two and three were able to produce high iron grade concentrates with an average reported between 60-70%Fe and mass yields averaging between 21 -38%. Silica showed good liberation in both zones with the upper zone concentrates averaging 1.8% SiO₂ and the lower zone averaging 1.6% SiO₂ in concentrate. Sulphur remains elevated in some concentrates and will continue to be the focus of the next stage of work.

The DTR test work found the weathering profile at Julia to exhibit a normal response with increasing mass yield from the oxide zone through transition and into fresh material. Satmagan analysis was completed on selected samples and showed a strong linear relationship to Davis Tube mass yield across all zones and BIF units.

A 1:5K geological mapping survey was completed during the reporting period over the MRP project including tenements M59/166, M59/764, E59/875, E59/2303, E59/2423, E59/2043, E59/2666, E59/2686 and E59/2719 final report and geology map has been received and will be consolidated into the new geology and resource modelling across the project.

Heritage surveys over four of the five exploration target areas have been completed by Badimia and Snappy Gum Archaeological and Ethnographic Surveys. The surveys took place over two 2 week campaigns, the first campaign commenced on the 17th April and the second campaign commenced on 15th May 2023, final report is pending. Areas A, B access track only, C, D and E were completed. Area B main area will be considered over the next field campaign work. Refer Figure 2

Environmental flora and fauna work area clearance surveys were completed over three of the five planned areas. Areas A, B access track only, C and D were field surveyed by Greenvalues during November 2022, final reports are pending. Planned areas B and E will be surveyed next field season. Refer Figure 2

Rockwater Hydrogeological and Environmental consultants completed a 3 day site assessment visit between 27th -29th March. This initial field investigation was completed to obtain information on groundwater in the BIF including groundwater levels and salinity's. A hydrogeological assessment report containing data and results of the field trip over MRP is pending.

Accent Resources are in the process of completing an updated geology resource model for the Magnetite Range Iron Ore Project, incorporating recent DTR test work. A Professional Mine Engineering consultancy have been engaged to conduct a conceptual study mine plan and gap analysis of current knowledge to complete a follow-on Pre-feasibility study outline description.

Further work planned for the next reporting period includes project wide logistics and strategic studies, 2022 DTR data review and selection of 2022 RCP intervals, completion of geology model updates, WAMEX review and scoping other relevant project studies. Exploration drill design for 2023-2024 infill drilling, located between Hematite Hill and Julia prospects and other highlighted exploration target areas are continuing.

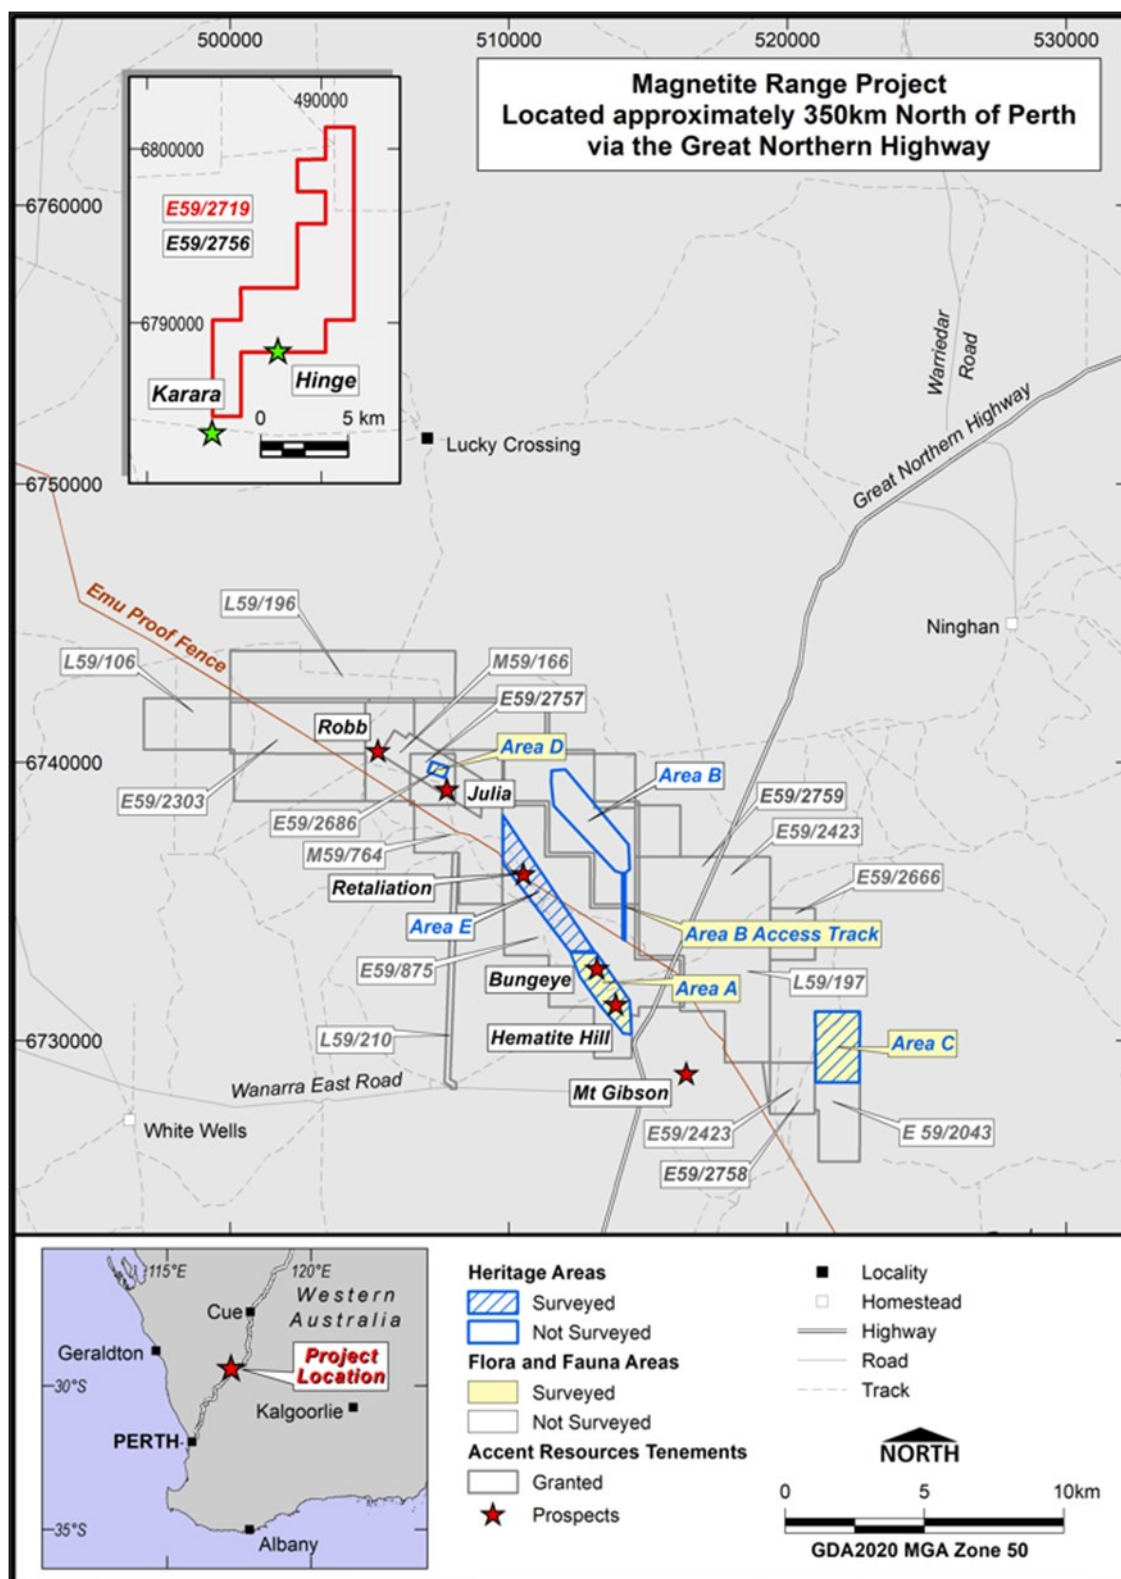

Figure 02 – Magnetite Range Activities Map for period ending 30th June 2023

Norseman Gold Project (ACS 100%)

The Norseman Gold Project occurs within a strongly mineralised portion of the southern Norseman-Wiluna greenstone belt and is located 5km south of the Norseman town site. A JORC 2004 Code Mineral Resource for Iron Duke and Surprise deposits of **1,039,400 tonnes @ 1.8 g/t Au for 59,500 ounces** (99 percentile upper cut, 1.0 g/t Au lower cut off) was announced to the ASX on 26 November 2012. Over 70-80% of the resource is shallow, within 50m of surface.

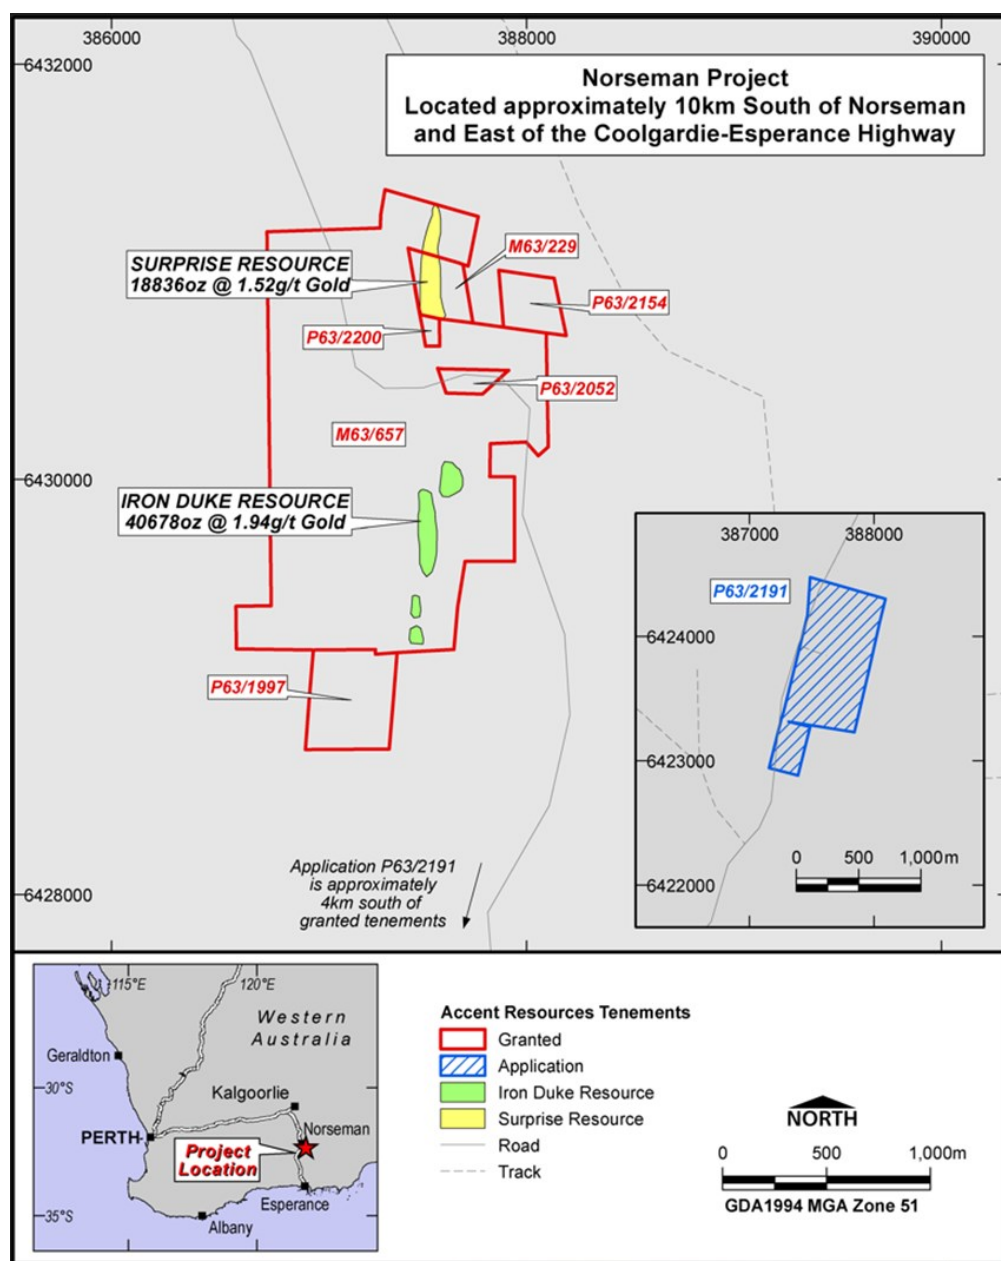

Figure 03 – Norseman Project – Tenement Location Map

The 2022 RCP drilling (2066m) intersected a sequence of banded iron formation (BIF), basalt, gabbro, chert +/- black shale and ultramafics +/- massive sulphides and quartz veining. The data collected from the 14 RCP holes will improve the current geological model underpinning the Mineral Resource and increase our subsurface geological understanding along strike across the project.

The drill holes were designed to:

- Test any lateral extension drilling between the Surprise and Iron Duke resources;
- Examine potential for depth continuity below the Surprise Mineral Resource, and;
- Identify the source of the geophysical magnetic low to the west of Surprise and targeting northern extensions to the mineralisation at Lady Mary.

Exploration results have been reported in a separate ASX announcement titled *"Drilling confirms extensions to Gold Mineralisation at the Norseman Project"* dated 26th October 2022.

A WAMEX review of 170+ historical reports was completed during the reporting period. Several historical geology reports and associated maps were identified as priority one data and have since been digitized into Geographic Information Systems and uploaded into digital mapinfo format.

An update of the geological model has commenced which will use the recently completed WAMEX summary and information gained from this. Review and collation of all newly acquired data will assist the next phase of drill orientation and targeting and a planned mineral resource estimate 'MRE' update.

Rehabilitation of all 2022 RCP drill pads has been completed.

Financial

Accent Resources held cash at bank of \$7,790,000 (as at 30 June 2023). Exploration expenditure cash outflow for the quarter was \$761,000.

\$51,051 was paid to Yuzi (Albert) Zhou as remuneration for the months of April to June 2023. Muqi Zhou received \$12,697 of remuneration for the months of April to June 2023. A total of \$29,041 was paid to non-executive directors as fees for the months of April to June 2023. A total of \$7,586 of superannuation was paid to related parties for the quarter ending June 2023.

Tenements

For the quarter ended 30 June 2023, all projects are in Western Australia

COMPETENT PERSONS STATEMENTS

For the Quarter Ended 30 June 2023

Competent Persons Statement – Magnetite Range Project

The information that relates to Mineral Resources at the Magnetite Range Iron (magnetite) Ore Project is based on a resource estimate that was prepared by Mr Stephen Hyland of Ravensgate Mineral Industry Consultants. Mr Hyland is a Fellow of the Australasian Institute of Mining and Metallurgy. The preparation was supervised by Mr G Rodney Dale FRMIT of PROMET Engineers Pty Ltd. Mr Dale is a Fellow of the Australasian Institute of Mining and Metallurgy. Mr Hyland takes overall responsibility for the Resource Estimate; Mr Dale takes responsibility for the geological model. Mr Hyland and Mr Dale have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity they are undertaking to qualify as Competent Persons as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Hyland and Mr Dale consent to the inclusion in this report of the matters based on their information (and the public reporting of these statements) in the form and context that the information appears. This information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

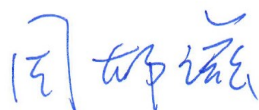

Competent Persons Statement – Norseman Project

The information that relates to Mineral Resources at the Norseman Gold Project is based on a resource estimate that was prepared by Mr Stephen Hyland of Ravensgate Mining Industry Consultants. Mr Hyland is a Fellow of the Australian Institute of Mining and Metallurgy. Mr Hyland has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Hyland consents to the inclusion in this report of the matters based on his information (and the public reporting of these statements) in the form and context that the information appears. This information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

Competent Persons Statement – Annual Mineral Reserves and Resources Statement

The Mineral Resources and Ore Reserves statement in this Quarterly Report is based on, and fairly represents, information and supporting documentation prepared by a competent person or persons. The Mineral Resources and Ore Reserves statement as a whole has been approved by Ms G Morton, who is a full-time employee of the Company and a Member of the Australian Institute of Geoscientists. Ms Morton consents to the inclusion of the Mineral Resources and Ore Reserves statement in the form and context in which it appears in this Annual Report. This information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

Yours faithfully,
Accent Resources NL

Yuzi Zhou
Executive Chairman
