

Baseline Environmental Fieldwork Program commences at Falcon Lake

BM8 initiates critical path activities relating to environmental permitting.

Battery Age Minerals Ltd (ASX: BM8; “Battery Age” or “the Company”) is pleased to advise that it has commenced its baseline fieldwork program at the Falcon Lake Lithium Project in Canada, with Wabadowgang Noopming Management engaged to carry out baseline terrestrial and fisheries field programs as part of the assessment process.

The objective of the baseline fieldwork program is to provide a comprehensive overview of the environmental conditions at Falcon Lake which will support environmental assessments and environmental permitting.

The fieldwork will help to identify and assess potential impacts from the Company’s proposed activities and ensure responsible environmental management throughout the project’s lifecycle.

The fieldwork program has already commenced with the installation of Audio Recording Units (“ARU’s”) on site. These units will capture the birdsong of migratory birds during their mating period. Migratory Birdsong is only recordable once a year during mating season from June to early July. The data collected from the ARU’s will contribute to the understanding of the local avian population and their habitat use, enabling informed decision-making during the environmental assessment process.

Battery Age recognises the importance of completing this work within the short window of the mating period to minimise disturbance to the migratory birds and comply with environmental regulations. The Company is committed to adhering to best practices in environmental stewardship and ensuring the preservation of the natural ecosystems surrounding Falcon Lake.

Battery Age CEO Gerard O'Donovan commented:

"We are pleased to have commenced baseline survey work at Falcon Lake. It is imperative that we gather baseline data at the earliest opportunity to provide us with comprehensive data moving forward.

"Doing this in parallel with our maiden drilling campaign will allow us to commence critical path activities while building on our understanding of the mineralisation at Falcon Lake."

Release authorised by the Board of Battery Age Minerals.
