## About American Pacific Borates Limited

American Pacific Borates Limited is focused on advancing its 100% owned Fort Cady Borate Mine Project located in Southern California, USA. Fort Cady is a highly rare and large colemanite deposit and is the largest known contained traditional borate occurrence in the world not owned by the two major borate producers Rio Tinto and Eti Maden. The JORC compliant Mineral Resource Estimate and Reserve is presented below. Importantly, it comprises 13.93Mt of contained boric acid.

In excess of US\$80m has been spent at Fort Cady, including resource drilling, metallurgical test works, well injection tests, permitting activities and substantial small-scale commercial operations and test works.

An updated enhanced Definitive Feasibility Study (“eDFS”) was completed in February 2021 (ASX release dated 4 February 2021<sup>1</sup>). The updated eDFS has production targets of 450kstp/a of boric acid and 400kstp/a of SOP in full production. Financial metrics include an unlevered post tax NPV<sub>8</sub> of US\$2.02bn, an unlevered post tax IRR of 41% and an EBITDA in the first full year of production of US\$453m.

In addition to the flagship Fort Cady Project, the Company also has an earn in agreement to acquire a 100% interest in the Salt Wells North and Salt Wells South Projects in Nevada, USA on the incurrence of US\$3m of Project expenditures. The Projects cover an area of 36km<sup>2</sup> and are considered prospective for borates and lithium in the sediments and lithium in the brines within the project area. Surface salt samples from the Salt Wells North project area were assayed in April 2018 and showed elevated levels of both lithium and boron with several results of over 500ppm lithium and over 1% boron.
