QUARTERLY ACTIVITIES REPORT
For the period ended 30 June 2015

COMPANY OVERVIEW

- Regalpoint Resources Limited was formed to use the best available science to explore the Australian continent for large-scale or high-grade mineral deposits.
- The Company currently holds projects in Queensland and Northern Territory which are prospective for uranium, gold and other commodities.
- The Company's objective is to evaluate and develop its assets and to create shareholder value through the discovery of economic mineral deposits.

SUMMARY

During the quarter the Company continued to manage and incrementally progress its portfolio of core uranium projects, and actively seek and evaluate new project opportunities with the potential to create near-term value for shareholders.

Figure 1: Location of the Regalpoint Resources projects

PAROO RANGE, QUEENSLAND (EPM16923, 16980, 25464, 25465, 25503; RGU 100%) - URANIUM

The Company's 100 %-owned Paroo Range Project covers a total of ~363 km² of granted exploration licences. Paroo Range is located only 25 km northeast of Mount Isa and is immediately adjacent to Paladin Energy's Isa Uranium Joint Venture, which includes a number of defined uranium resources including those at Valhalla, Skal and Bikini. RGU is targeting similar uranium resources where mineralisation is developed in fault-breccia zones associated with albite-haematite alteration within the Eastern Creek Volcanics.

RGU completed an airborne geophysical survey over EPM16923 and EPM16980 in December 2010 and defined a number of robust uranium anomalies. While some of these anomalies had already been explored, a number of new targets were identified. The Skevi Prospect and its northern extension, Thesaurus, were discovered at one of these targets where surface samples returned up to 0.56 % U₃O₈.

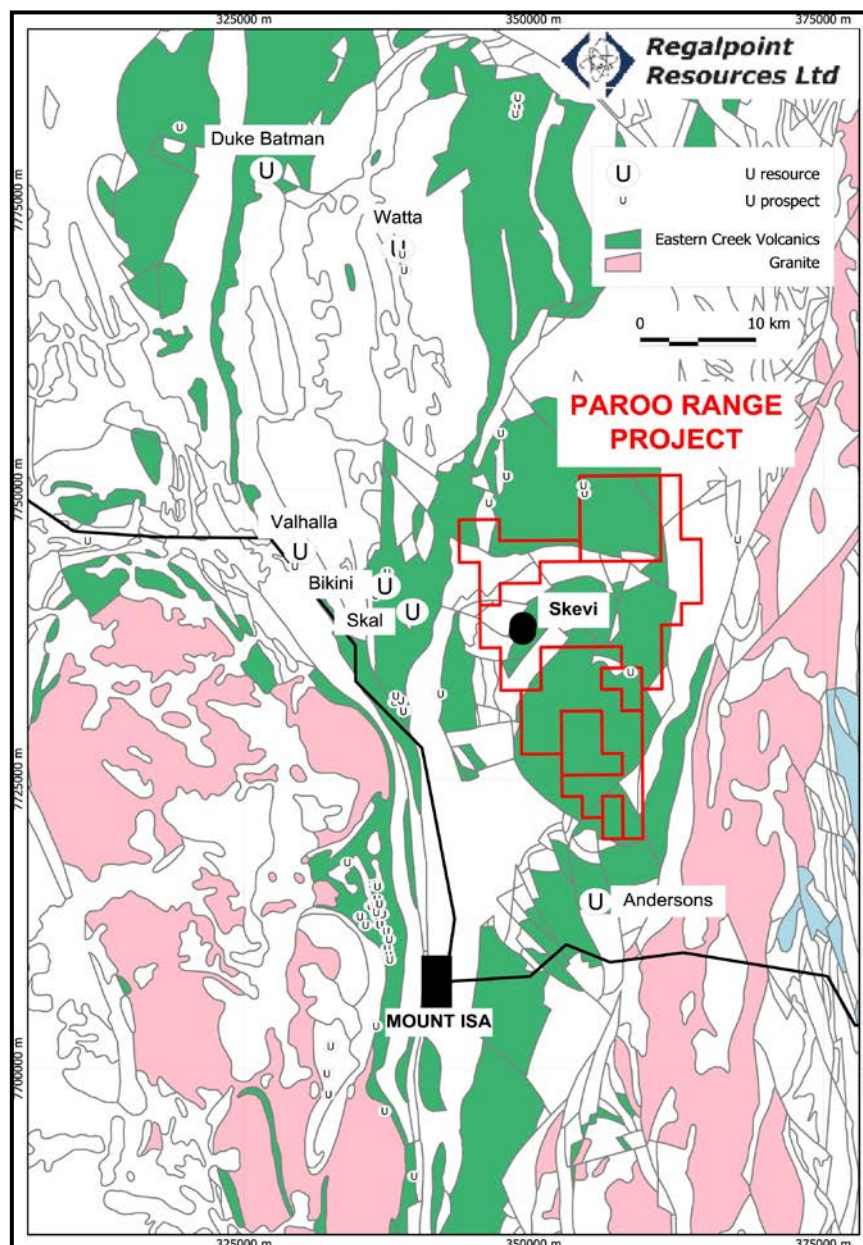

Figure 2: Known uranium prospects in Mount Isa area with exposed extent of Eastern Creek Volcanics

RC drilling at the Skevi Prospect identified several discrete mineralised faults spaced 6 to 10 metres apart and extending sub-vertically to depth. The best drill result was 7 metres @ 0.11 % U_3O_8 , which included 1 metre @ 0.42 % U_3O_8 (PSRC023). The fault zone trends north-south for over 500 m and appears to be open in both directions where it is buried by shallow sediments. The geological setting of the uranium mineralisation at Skevi closely resembles that reported at the Skäl deposit, where a series of sub-parallel, sub-vertical mineralised lenses within a fault breccia are offset by cross faults.

In 2014, three (3) further licences were granted covering the north and south extensions of the prospective Eastern Creek Volcanics. These new licences include a number of known uranium prospects.

No fieldwork was carried out on the Paroo Range Project during the quarter. Step-out drilling is planned at the Skevi Prospect to further constrain the extent of the mineralised envelope, especially to the north towards and around the Thesaurus Prospect, where surface samples returned up to 542 ppm U_3O_8 . Basic field mapping and sampling are required elsewhere in the project area.

RUM JUNGLE, NORTHERN TERRITORY (EL26094, 26098; RGU 100%) – GOLD, URANIUM

The Company's Rum Jungle Project is located about 55 km south of Darwin in the Batchelor – Adelaide River area where there are numerous uranium, gold and base metal prospects and abandoned mines. The project comprises one granted Exploration Licence (EL26094) of approximately 28 km² and one application (ELA26098) for approximately 30 km².

RGU has completed drilling, sampling and geophysical surveys within EL26094, and has confirmed that the Highlander gold prospect is a high quality target in an under-explored region. No fieldwork was carried out on the Rum Jungle Project during the quarter and future drilling will target the northern extensions of the Highlander gold trend.

CORPORATE

The Company is continuing to manage costs very closely and actively seek new investment opportunities for the Company. All fees to non-executive directors and corporate and management fees to the Transcontinental Group (RGU's major shareholder) continue to be accrued.

CURRENT TENEMENT SCHEDULE – 30 JUNE 2015

During the quarter, EL 26094 was renewed and the Company was informed that application ELA 26098 will be coming out of moratorium later this year. The Company surrendered the final two licences of the King Leopold Project.

Competent Persons Statement

The information in this report that relates to Exploration Results and Exploration Targets is based on information compiled by Dr Michael Green, who is a Member of the Australian Institute of Geoscientists ("MAIG"). Dr Green is a consultant geologist with Khalkeus Minerals Ltd. Dr Green has sufficient experience relevant to the styles of mineralisation and type of deposits under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Dr Green consents to the inclusion in this report of the matters based on his information in the form and context in which they appear.

The Exploration Results referenced herein for the Paroo Range Project were reported to the ASX on:

*2 November 2011 [**Significant New Mineralised Zone – Paroo Range (RGU:100%)**] and*

*17 July 2012 [**Encouraging drill results from Paroo Range**] under the 2004 JORC Code, and*

*31 January 2014 [**Quarterly activities report for the period ended 31 December 2013**]*

under the 2012 JORC Code. There have been no material changes since these results were reported.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements and petroleum tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement or petroleum tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
